

Software Requirements Specification (SRS): Colossians Cleaning Services

1. Objective

The objective of this Software Requirements Specification (SRS) is to define the functional and non-functional requirements for extending the existing web-based CRM portal into a mobile application ecosystem for Customers (Clients) and Staff (Cleaners), while retaining a web-based Admin Portal built using Laravel.

The current system is a web CRM that manages end-to-end cleaning operations, including bookings, job scheduling, staff assignment, payments, reviews, and notifications. While the web portal effectively serves administrative and desktop use cases, there is a strong opportunity to enhance usability, accessibility, and operational efficiency by introducing dedicated mobile applications.

Primary Goals

- Convert the existing web CRM experience into mobile-first applications for:
 - Customers (booking, tracking, reviews, notifications)
 - Staff/Cleaners (job management, check-in/out, availability, payouts)
- Maintain a centralized Admin Web Portal (Laravel-based) for:
 - Operational control
 - Job assignment and monitoring
 - Staff and customer management
 - Payments, reports, and audits
- Ensure real-time synchronization between web and mobile platforms using shared APIs
- Improve user experience, response time, and on-the-go accessibility without changing core business workflows

2. Platform Scope

User Type	Platform
Admin	Web Portal (Laravel)
Customer/ Cleaner	Mobile App (iOS & Android)

3. Proposed System Architecture

3.1 Architecture Overview

The platform will use a **centralized, API-driven architecture** with:

- **One backend system (Laravel)**
- **One mobile application** for both **Clients and Cleaners**
- **One web-based Admin Portal**

Instead of building two separate mobile applications, **a single mobile app will be developed**, and users will **select their role (Client or Cleaner)** during onboarding or login.

This approach:

- Reduces development and maintenance cost
- Ensures consistent user experience
- Allows easy role switching (if approved)
- Keeps all business logic centralized

3.2 High-Level System Components

1. Backend System (Central Platform)

Technology: Laravel (Web + REST APIs)

The Laravel backend will act as the **single source of truth** for the entire ecosystem.

Responsibilities:

- User authentication and role assignment
- Role-based access control (Admin / Client / Cleaner)
- Job lifecycle management
- Scheduling and conflict detection
- Payments and payouts calculation
- Notifications (email, SMS, in-app)
- Compliance, audit logs, and security rules

The backend exposes **secure APIs** consumed by the mobile app.

2. Admin Web Portal

Platform: Web (Laravel)

Used only by system administrators.

Functions:

- Manage jobs, schedules, and assignments
- Approve and monitor cleaners
- Manage customers and properties

- Review documents, eligibility, and training
- Monitor job execution and payouts
- Generate reports and audit logs

Admins do **not** use the mobile app.

3. Single Mobile Application (Client + Cleaner)

Platform: Mobile App (Android & iOS – cross-platform)

This is **one application**, shared by both user types.

Role Selection Flow

- On first launch or registration, user selects:
 - **I am a Client**
 - **I am a Cleaner**
- Based on the selected role:
 - Relevant onboarding flow is shown
 - Only role-specific features are enabled
- Backend rules enforce role permissions

A user can never access features outside their assigned role.

3.3 Mobile App – Role-Based Experience

Client Role (within same app)

After login as Client, the app displays:

- Client dashboard
- Property management
- Job creation and calendar
- Job tracking and notifications
- Preferred staff and profile management

Cleaner Role (within same app)

After login as Cleaner, the app displays:

- Cleaner dashboard
- Job assignments and acceptance
- Check-in / check-out
- Availability management
- Work hours and payment view
- Training, documents, and reviews

Each role has:

- Separate navigation
- Separate permissions
- Separate workflows

But shares:

- Same app binary
- Same backend
- Same notification system

3.4 Authentication & Role Management

- Single authentication system
- Role stored at backend level
- Token-based authentication for mobile app
- Role checked on every API request
- Backend decides:
 - What data is accessible
 - What actions are allowed

This prevents role misuse or privilege escalation.

3.5 Data Synchronization & Real-Time Updates

- All data is stored in one centralized database
- Actions by one role reflect instantly across others:
 - Client creates job → Admin sees it
 - Admin assigns cleaner → Cleaner receives notification
 - Cleaner checks out → Client sees job completed

No duplication or manual syncing required.

3.6 Advantages of Single Mobile App Approach

- Lower development cost than two separate apps
- Faster deployment and updates
- Unified notification and authentication system
- Easier future enhancements
- Reduced app store management overhead

3.7 Architecture Summary (Simplified)

- **Laravel Backend** → Core business logic & APIs
- **Admin Web Portal** → Full operational control

- **Single Mobile App** → Client & Cleaner access via role selection
- **Role-Based UI & APIs** → Secure and isolated experiences
- **Central Database** → Real-time consistency

Features: For each user

A. Admin Portal (Web – Laravel)

1. Admin Dashboard (Main Control Panel)

Purpose

The Admin Dashboard is the **central command screen** for the entire platform.

It is the **first screen displayed after admin login** and provides a **real-time operational overview** of customers, cleaners, and jobs.

The dashboard is designed to allow the admin to:

- Monitor daily operations at a glance
- Quickly identify pending or problematic jobs
- Navigate directly to calendars, customers, cleaners, or job details
- Take immediate actions without unnecessary navigation

1.1 Dashboard Navigation Structure (Top / Sidebar)

The following navigation items must be visible and accessible at all times:

- **Dashboard (Home)**
- **Calendar**
- **Customer(s)**
- **Cleaner(s)**
- **Add Job**
- **Today's Jobs**

The logged-in role is displayed as:

- **Super Admin**

This confirms the user has full system privileges.

1.2 Dashboard Layout Overview

The dashboard consists of **three primary sections**:

1. **Summary & Navigation Section**
2. **Jobs Listing (Primary Focus Area)**

3. Quick Access & Drill-Down Actions

1.3 Key Summary Information (Implicit on Dashboard)

Even if shown visually as counts, the dashboard must internally calculate and support:

- Total customers
- Total cleaners
- Total jobs created
- Jobs scheduled for today
- Pending jobs
- Approved jobs
- Cancelled jobs

Each metric must be:

- Clickable
- Redirect the admin to a filtered job or user list

1.4 Jobs Listing Section (Core Dashboard Content)

This is the **most important part of the dashboard**.

Job List Display

The dashboard displays a **chronological list of jobs**, showing both upcoming and recent jobs.

Each job entry must display the following columns clearly:

Job Information Displayed per Row

1. **Client**
 - Client full name
 - Property label (example: *"Nellie – 8 The Grove"*)
2. **Status**
 - Pending
 - Approved
 - (Other statuses handled elsewhere: Completed, Cancelled)

Status must be visually distinguishable (color or badge).

3. **Time**
 - Job start time – job end time
Example: 09:30 – 11:30
4. **Cleaner(s)**
 - One or more cleaner names
 - Displayed as a comma-separated list

- If no cleaner assigned yet, this must be clearly indicated
- 5. **Created Date**
 - Date the job was created in the system
Example: 15/01/202

Example Job Entry (Conceptual)

- **Client:** Nellie Ogbonna
- **Property:** Nellie – 8 The Grove
- **Status:** Pending
- **Time:** 09:30 – 11:30
- **Cleaner(s):** Liudmyla Ivanova
- **Created:** 02/01/2026

1.5 Dashboard Behavior & Interactions

Click Behavior

- Clicking **any job row** opens the **Job Details screen**
- Clicking **Calendar** opens the scheduling calendar
- Clicking **Customer(s)** opens the customer list
- Clicking **Cleaner(s)** opens the cleaner list
- Clicking **Add Job** opens the job creation form

Refresh Behavior

- Dashboard data should:
 - Auto-refresh at regular intervals **or**
 - Provide a manual refresh option

Alerts & Attention Indicators

- Pending jobs must be visually noticeable
- Jobs without assigned cleaners must be highlighted
- Any scheduling conflicts (if detected) must show warnings

2. Job Details Screen (Admin View)

Purpose

The Job Details screen provides a **complete, read-only + action-enabled view** of a single job.

This screen is used by the admin to:

- Review all job information
- Assign or change cleaners
- Monitor job readiness

- Ensure compliance before execution

2.1 Job Scheduling Information

Displayed at the top:

- **Job Scheduled:** Yes / No
- **Job Start Date**
- **Job Start Time**
- **Job End Date**
- **Job End Time**
- **Job Status** (Pending / Approved)

This section immediately tells the admin:

- Whether the job is ready
- Whether action is required

2.2 Client & Property Information

Client Details

- Client name (example: *Nellie Ogbonna*)

Property Details

- Property label
- Full address:
 - Address line
 - City
 - Postal code
- Property type:
 - Private Home / Commercial
- Property subtype:
 - Example: End of Terrace

Property Layout Details

- Number of bedrooms
- Bathrooms
- Guest/Separate toilets
- Living rooms
- Dining rooms

This information helps cleaners understand workload and scope.

2.3 Cleaning & Service Details

Displayed clearly:

- Cleaning type
Example: *Residential Surface Cleaning*
- Animals on property: Yes / No
- Staff preference: Specific cleaner or “No Preference”
- Equipment availability:
 - Hoover (example: Miele)
 - Cleaning products (Provided / Not provided)
 - Washing machine (Provided / Not provided)
 - Dryer (Provided / Not provided)

2.4 Payment & Job Configuration

- **Payment Source**
 - Residential
 - Commercial
- **Number of Cleaners Needed**
- **Additional Instructions / Notes**
 - Example: *HMO communal area cleaning*

This section directly impacts cleaner assignment and payout.

2.5 Cleaner Assignment Section

Cleaner Table

Displayed as a structured list:

Columns:

- Cleaner name
- Status (Pending / Assigned / Accepted)
- Share profile option

Example:

- Liudmyla Ivanova – Pending

Actions Available to Admin

- **Assign Cleaner**
- Choose cleaner from eligible list
- System must validate:
 - Availability
 - Eligibility

- No conflicts
- Required number of cleaners

Admin cannot assign:

- Suspended cleaners
- Ineligible cleaners
- Unavailable cleaners

2.6 Action Controls

Available actions on Job Details page:

- Assign cleaner
- Change assigned cleaner
- Review job readiness
- Monitor acceptance status

Once job is completed:

- Job becomes locked
- No edits allowed
- Used for audit and reporting

2. Calendar Module (Admin Scheduling System)

The Calendar Module is the core operational dashboard used by administrators to plan, monitor, and control all cleaning jobs across clients, cleaners, properties, and dates.

It provides a calendar-based view of all jobs, supports advanced filtering, and allows full job lifecycle management directly from the calendar.

2.1 Calendar Views

The admin can switch between multiple calendar views depending on planning needs:

- **Daily View**
 - Hour-by-hour breakdown of jobs
 - Useful for same-day conflict resolution and urgent scheduling
- **Weekly View**
 - Cleaner workload distribution across the week
 - Helps balance assignments and availability
- **Monthly View (Default)**
 - High-level overview of all jobs
 - Displays multiple jobs per day with “+ more” expansion

2.2 Calendar Header & Filters

At the top of the calendar, the admin has **real-time filtering controls** to narrow down jobs:

Filters Available

- **Client Name** – Select a specific client
- **Cleaner Name** – View jobs assigned to a specific cleaner
- **Property Name** – Filter by service location
- **Job Status** – All / Created / Pending / Approved / In Process / Finished / Cancelled
- **Month & Year Selector** – Navigate between months (e.g., January 2026)

These filters update the calendar dynamically without page reload.

2.3 Job Display on Calendar (Monthly View)

Each calendar date displays **multiple job cards**. If jobs exceed visible space, a “**+X more**” indicator appears.

Each Job Card Displays:

- **Client Name**
- **Service Time Slot**
 - Start time – End time (e.g., 🕒 08:00 – 10:30)
- **Cleaner Name**
 - Or “Cleaner yet to be assigned”
- **Property Address**
- **Job Status**
 - Visually distinguishable (e.g., Finished, Approved, Pending, In Process)

Status-Based Visual Indicators

- Jobs are **color-coded by status** to allow instant recognition:
 - Created
 - Pending
 - Approved
 - In Process
 - Finished
 - Cancelled

2.4 Job Status Lifecycle

Jobs move through a clearly defined lifecycle:

1. **Created**
 - Job created but cleaner not assigned
2. **Pending**
 - Awaiting approval or confirmation

3. **Approved**
 - Confirmed and scheduled
4. **In Process**
 - Cleaner has started the job
5. **Finished**
 - Job completed successfully
6. **Cancelled**
 - Job cancelled by admin or system

Each status change is logged and reflected instantly on the calendar.

2.5 Job Detail View (On Click)

When the admin clicks on any job in the calendar, a **Job Detail Panel / Page** opens.

Job Detail Information Includes:

Basic Information

- Client Name
- Property Name & Full Address
- Job Date
- Start Time & End Time
- Total Duration

Assignment Details

- Assigned Cleaner(s)
 - Supports single or multiple cleaners
- Cleaner availability status
- Option to assign / reassign cleaner

Job Status Controls

- Change job status (Created → Pending → Approved → etc.)
- Cancel job with reason
- Mark job as completed (manual override if needed)

Operational Notes

- Internal admin notes
- Cleaner notes (if applicable)

2.6 Admin Actions from Calendar

Directly from the calendar or job detail view, admin can:

- Create a **new job** on any selected date
- Assign or change cleaner(s)
- Modify job time slots
- Cancel or reschedule jobs
- View full job history
- Resolve scheduling conflicts

2.7 Cleaner Availability & Workload Visibility

The system displays **cleaner availability blocks** directly within the scheduling logic.

Admin can see:

- Cleaner working hours
- Unavailable days
- Existing job assignments
- Daily workload per cleaner

This ensures realistic and fair scheduling.

2.8 Conflict Detection & Validation (Critical Logic)

The system automatically validates scheduling actions and **prevents conflicts**.

System Warnings Triggered When:

- A cleaner is **double-booked** for overlapping times
- A cleaner exceeds **maximum daily working hours**
- A job overlaps another job for the same cleaner
- A cleaner is marked **unavailable** on that date

Admin receives:

- Immediate visual warnings
- Clear error messages explaining the conflict
- Option to adjust time or cleaner before saving

3. Job Management

The Job Management module allows the **Super Admin / Admin** to create, schedule, edit, copy, and manage all cleaning jobs across residential and commercial clients.

This module is tightly integrated with the **Calendar Module**, **Cleaner Availability**, and **Notification System**.

3.1 Jobs Listing (Admin Jobs Dashboard)

The Jobs Dashboard displays all jobs in a **tabular, searchable, and actionable format**.

Core Features

- Global search across jobs
- Sortable columns
- Pagination
- Bulk actions (delete, status update)
- Quick access to job details
- Copy job details for repeat bookings

Jobs Table Columns

Each job row includes the following data:

Client & Service Information

- **Client Name**
- **Cleaning Type**
 - Standard Cleaning
 - End of Tenancy Cleaning
 - Office Cleaning
 - Serviced Accommodation
 - Communal / Others
- **Property Type**
 - Private Home
 - Office
 - Serviced Accommodation
 - Commercial

Date & Time

- **Job Date**
- **Start Time**
- **End Time**
- **Expected Duration (calculated)**

Property Details

- **Full Address**
- **Postal Code**
- **Access to Property**
 - Client Will Open
 - Will Get a Set of Keys
- **Venue Address** (for commercial / events)

Job Configuration

- **Job Status**
 - Created
 - Pending
 - Approved
 - In Process
 - Finished
 - Cancelled
- **Job Type**
 - Residential / Commercial
- **Number of Cleaners**
- **Assigned Cleaner(s)** (supports multiple cleaners)

Equipment & Supplies

- Provide Cleaning Products (Yes / No)
- Washing Machine Available (Yes / No)
- Dryer Available (Yes / No)
- Hoover Type (None / Henry / Dyson / Other)

Preferences & Notes

- **Staff Preference**
 - Male / Female / No Preference
- **Additional Details / Instructions**
- **Number of Guests** (if applicable)
- **Celebration Type** (if applicable)

Recurrence & Rules

- **RRULE / Recurrence Type**
 - One-time
 - Weekly
 - Multiple days per week
- **Job Start Date**
- **Job End Date**
- Recurring schedule details (e.g., every Tuesday, every Monday & Wednesday)

Job Actions (Per Row)

Admin can:

- **Edit Job**
- **Delete Job**
- **Copy Job Details** (for fast re-creation)

- **View Full Job Details**
- **Change Job Status**

3.2 Add Job (Manual Job Creation)

Admin can manually create a new job for **any client**.

Create Cleaning Job Form

Client & Property

- Select existing client or add new client
- Select property or add new property
- Property address & postal code

Payment

- Select payment method for invoice
- Price auto-calculated or manually overridden

Scheduling

- Job Start Date
- Start Time
- End Time
- Number of cleaners required

Cleaning Configuration

- Cleaning Type
- Job Type (Residential / Commercial)
- Staff Preference (Male / Female / No Preference)

Equipment & Access

- Access to Property (Client Will Open / Keys)
- Hoover availability
- Washing machine availability
- Dryer availability
- Cleaning products provided (Yes / No)

Notes

- Additional instructions (up to 100 characters)
- Internal admin notes (optional)

System Actions on Job Creation

- Validate all mandatory fields
- Calculate duration
- Check cleaner availability
- Save job to database
- Generate unique Job ID
- Set default status (Created or Pending)
- Send confirmation SMS / Email to client
- Notify cleaner(s) if assigned

3.3 Schedule Job (From Job Requests)

Used when a job request exists but is **not yet scheduled**.

Features

- View list of unscheduled job requests
- Open request details
- Assign date & time
- Assign cleaner manually or auto-assign
- Convert request → scheduled job
- Apply recurrence rules (weekly, multi-day)
- Send notifications to client & cleaner

3.4 Job Detail View (View / Copy / Edit)

When admin clicks any job, a **detailed job view** opens.

Job Detail Sections

Overview

- Job ID
- Status
- Client name
- Cleaning type
- Job type
- Date & time
- Duration

Property Details

- Full address
- Postal code
- Access method

Assignment

- Assigned cleaner(s)
- Cleaner availability
- Staff preference

Equipment & Supplies

- Cleaning products
- Washing machine
- Dryer
- Hoover type

Recurrence

- Recurrence rule (RRULE)
- Job start & end dates
- Weekly pattern

Notes

- Client instructions
- Admin notes

Additional Admin Actions

- Copy job details to create a new job instantly
- Change job status
- Reassign cleaners
- Modify time or recurrence
- Cancel job with reason

4. Scheduled Jobs (Recurring Job Management)

The **Scheduled Jobs module** is used when a customer requires **recurring cleaning services** (weekly, bi-weekly, or custom schedules).

Instead of creating individual jobs manually each time, the system manages them using **recurrence rules (RRULE)** and automatically generates future jobs.

4.1 Purpose of Scheduled Jobs

This module allows Admin to:

- Manage long-term recurring clients
- Automatically generate future jobs
- Assign fixed or rotating cleaners
- Pause or resume services when required
- Maintain consistency for commercial and residential clients

Typical use cases:

- Weekly office cleaning
- Bi-weekly residential cleaning
- Multi-day recurring commercial contracts

4.2 Scheduled Jobs Listing (Admin View)

This screen shows **all recurring job templates**, not individual daily jobs.

Search & Filters

Admin can search scheduled jobs using:

- Property name
- Client name
- Cleaner name
- Job type (Residential / Commercial)
- Active / Inactive status

Scheduled Jobs Table Fields

Each row represents **one recurring job configuration**.

Client & Property

- Client name
- Property name
- Full address
- Postal code

Scheduling & Frequency

- **Frequency**
 - Weekly
 - Every 2 weeks
 - Custom recurrence
- **RRULE description**
 - e.g. "Every single week on Tuesday"
- **Start date**
- **End date** (optional)
- **Next job date** (auto-calculated)
- **Occurrence count** (if limited)

Time & Assignment

- Start time

- End time
- Assigned cleaner(s)
- Copy cleaners option (reuse same cleaners across occurrences)

Job Classification

- Job type (Residential / Commercial)
- Cleaning category

Status & Control

- Active (true / false)
- Inactive start date
- Inactive end date
- Is deleted (soft delete)

4.3 Creating a Recurring Job (Scheduling Flow)

When a customer requests recurring cleaning:

Step 1: Create Base Job

Admin creates a job using **Add Job** flow:

- Client & property selected
- Cleaning type defined
- Equipment & access preferences set
- Preferred cleaner assigned (optional)

Step 2: Enable Recurrence

Admin selects:

- Frequency (weekly / bi-weekly / custom)
- Days of week (e.g. Monday, Wednesday)
- Start date
- Optional end date or number of occurrences

System generates an **RRULE** internally.

Step 3: Assign Cleaners

Admin can:

- Assign fixed cleaner(s) for all occurrences
- Assign multiple cleaners
- Allow future reassignment if needed

4.4 Automatic Job Generation Logic

The system will:

- Calculate **next job date**
- Auto-create individual jobs based on RRULE
- Maintain link between scheduled job and generated jobs
- Prevent overlaps or double booking
- Respect cleaner availability and daily limits

Each generated job:

- Appears in Jobs table
- Appears in Calendar
- Inherits all base settings
- Can still be edited individually if required

4.5 Pause / Hold / Resume Scheduled Job

Pause Job

Admin can pause a scheduled job:

- No future jobs are generated
- Existing generated jobs can remain or be cancelled (admin choice)

Hold Period

Admin can define:

- Inactive start date
- Inactive end date

Use cases:

- Client on holiday
- Temporary property closure

Resume Job

- Recurrence resumes automatically after inactive end date
- Next job date recalculated

4.6 Updating Scheduled Jobs

Admin can:

- Update billing type
- Update assigned cleaner(s)
- Change schedule time
- Change recurrence rule
- Copy cleaner assignments
- Delete scheduled job (soft delete)

System behavior:

- Future jobs reflect updates
- Past jobs remain unchanged

4.7 Conflict Detection (Critical)

System must automatically warn admin if:

- Cleaner is already booked
- Cleaner exceeds daily working hours
- Job overlaps another scheduled job
- Cleaner is marked unavailable

Admin can:

- Override with confirmation
- Change cleaner
- Change time

4.8 Notifications

When scheduled jobs are:

- Created
- Updated
- Paused
- Resumed

System sends notifications to:

- Client (email / SMS)
- Cleaner(s) (app notification)

5. Customer Management

The Customer Management module enables the Super Admin / Admin to manage all clients (residential and commercial) from a single, centralised panel.

This module is tightly connected to Jobs, Billing, and Scheduled (Recurring) Jobs.

5.1 Customers Listing (Admin View)

This screen displays **all customers** in a searchable and manageable table.

Core Features

- Global search
- Sorting by name, city, or status
- Pagination
- Bulk deletes
- Quick access to customer profiles
- Login-as-customer (if permitted)

Customers Table Fields

Each row contains:

Basic Information

- First Name
- Last Name
- Email
- Phone Number
- Date of Birth (if provided)

Address Details

- Address
- City
- Postal Code

Business Information

- Company name (if applicable)
- Residential / Commercial indicator

Account Status

- Email subscriptions (Enabled / Disabled)
- Account verification status (Verified / Not verified)
- Account active state

Admin Actions per Customer

- View customer profile
- Edit customer details
- Delete customer (soft delete)

- Login as customer (support/debug use only)

5.2 Customer Profile When admin clicks on any customer, a full customer profile page opens.

Customer Profile Sections

1. Personal & Contact Information

- First name
- Last name
- Email
- Phone number
- Date of birth
- Email subscription status
- Account verification status

2. Address & Property Information

- Primary address
- City
- Postal code
- Linked properties (multiple allowed)
- Property labels (e.g. "Office – Clerkenwell Road")

3. Job History

- List of all past jobs
- Current active jobs
- Upcoming scheduled jobs
- Job status per entry (Finished, Pending, Approved, Cancelled)

Admin can:

- Click any job to open job details
- Copy job details to create a new job
- Schedule a new job for this customer

4. Recurring / Scheduled Jobs

- List of all active recurring jobs
- Frequency details
- Next job date
- Assigned cleaner(s)
- Pause / resume recurring service

5. Billing & Payment Overview

- Billing type (Residential / Commercial)
- Payment method history
- Invoices (if enabled in later phase)

6. Communication & Notes

- Internal admin notes
- Special client instructions
- Access preferences (keys, opening)

5.3 Create / Update Customer

Admin can:

- Add new customer manually
- Edit existing customer details

Fields Supported

- Personal details
- Contact information
- Company name (optional)
- Email preferences
- Verification status

System behavior:

- Validate email and phone number
- Prevent duplicate email accounts
- Link customer automatically to jobs and properties

5.4 Customer Deletion Rules

- Soft delete only
- Historical jobs remain intact
- Scheduled jobs must be paused or reassigned
- Customer can be restored if needed

6. Cleaner Management

The **Cleaner Management module** allows the **Super Admin / Admin** to manage all cleaning staff, their profiles, verification status, availability, and job assignments from a single centralized system.

This module is tightly integrated with:

- Job Management

- Calendar & Scheduling
- Recurring Jobs
- Cleaner Mobile App

6.1 Cleaners Listing (Admin View)

This screen displays **all cleaners** in a searchable and filterable table.

Core Features

- Global search
- Filter by cleaner status
- Pagination
- Bulk delete (soft delete)
- Quick access to cleaner profiles
- Login as cleaner (support/debug only)

Cleaners Table Fields

Each row represents one cleaner account and includes:

Personal Information

- First name
- Last name
- Date of birth
- Phone number
- Email address

Address Information

- Address
- City
- Postal code

Employment & Compliance

- National Insurance Number
- Company name (if applicable)
- Student status (Yes / No)
- Share code (if applicable)
- Email subscription status
- Verification status

Account & Work Status

- Approval status

- Unapproved
- Approved
- Suspended
- Active status (Yes / No)
- Cleaner availability flag

Admin Actions per Cleaner

- View cleaner profile
- Edit cleaner details
- Approve / unapproved cleaner
- Update email
- Update NI number
- Activate/deactivate cleaner
- Delete cleaner (soft delete)
- Login as cleaner (optional)

6.2 Cleaner Profile (Detail View)

When admin clicks on any cleaner, a **full cleaner profile page** opens.

Cleaner Profile Sections

1. Personal & Contact Details

- Full name
- Email
- Phone number
- Date of birth
- Address
- City & postal code

2. Employment & Verification

- Approval status
- Verification status
- National Insurance number
- Share code
- Student status
- Company name (if any)

3. Availability & Scheduling

- Weekly availability calendar
- Unavailable dates
- Daily working hour limits

Admin can:

- Mark cleaner unavailable
- Set recurring unavailability
- Override availability if needed

4. Job Assignment History

- Upcoming assigned jobs
- Past completed jobs
- Cancelled jobs
- Recurring job assignments

Admin can:

- Reassign jobs
- Remove cleaner from future jobs
- View job details directly

5. Performance & Notes

- Internal admin notes
- Flags or warnings
- Job completion history

6.3 Cleaner Approval Workflow

Registration

- Cleaner registers via mobile app or admin panel
- Account status = Unapproved

Admin Review

Admin verifies:

- Identity details
- NI number / Share code
- Contact information

Approval

- Cleaner status updated to Approved
- Cleaner becomes assignable to jobs
- Cleaner gains access to job listings in app

6.4 Cleaner Deactivation & Deletion Rules

- Deactivation hides cleaner from assignment list
- Existing assigned jobs trigger warning
- Soft delete only (historical data preserved)

6.5 Integration With Mobile App

Single App – Role-Based Login

- Cleaner selects **Staff** role at login
- Access limited to:
 - Assigned jobs
 - Job details
 - Status updates (In Process / Finished)
 - Notifications

Cleaner **cannot**:

- See other cleaners
- Access admin data

7. Requested Jobs & Cleaner Assignment

The **Requested Jobs module** is where all newly created jobs (either by customers or admin) appear **before a cleaner is assigned**. This module allows the **Super Admin / Admin** to manage allocation efficiently and ensures jobs are matched to available, qualified cleaners.

7.1 Requested Jobs Listing (Admin View)

Table Columns / Fields:

- Job Type (Residential / Commercial)
- Date
- Start Time & End Time
- Number of Cleaners Required
- Customer Name
- Property Name
- Allocation Status (Allocated / Not Allocated)

Actions Available:

- **Assign Job** → Opens the assignment panel
- **Delete Job(s)** → Remove unwanted or cancelled jobs
- **Search & Filter** → By customer name, property, job type, or allocation status

Example Display:

Job Type	Date	Start	End	Cleaners	Customer	Property Name	Allocation Status
Residential	17-01-2026	09:00	14:00	2	Rayane Saidi	Rayane - 30 Marylebone High St	Not Allocated
Commercial	25-01-2026	11:00	14:00	1	Michael Andrews	Michael - 43 Kings Cross Road	Not Allocated
Residential	20-01-2026	10:30	13:30	1	Hester Wax	Hester - 8 Henson Avenue	Not Allocated
Residential	22-01-2026	09:00	11:00	1	Hira Razzaque	Hira - 47 Woodyates Road	Not Allocated

7.2 Cleaner Assignment Panel

When the admin clicks **Assign Job** for a specific Job ID:

Panel Highlights:

- **Warning:** ⚠ Once cleaners are assigned, this action cannot be revoked.
- **Job Details Displayed:**
 - Job Type
 - Job Date & Time
 - Customer Name & Property
 - Number of cleaners required

List of Available Cleaners:

All **active cleaners** who have applied appear as a selectable list:

- Rwinkle Rwinkle
- Manju Bala
- Emmanuella OGHENEKEVWE EJITAGHA
- Laxmi Kumari Chaudhary
- SHEUN OROSUN MICHAEL
- Elvis Gemnwi George

Admin Actions:

1. Select one or multiple cleaners for assignment
2. Confirm assignment
3. System updates:
 - Job Allocation Status → **Allocated**
 - Assigned cleaner(s) receive notification via **email / app**
 - Job appears in **Scheduled Jobs** for cleaner & admin
 - Job details page updates with assigned cleaner info

Notes / Business Logic:

- Number of cleaners assigned cannot exceed job requirement
- System prevents assigning cleaners who are already double-booked or marked unavailable
- Admin can view cleaner profiles before assignment
- Once assigned, assignment cannot be revoked; changes require creating a new job or admin override

7.3 Workflow Diagram (Conceptual)

1. **Job Creation:**
 - Created by admin or cleaner
 - Status = **Not Allocated**
2. **Cleaner Notification:**
 - Active cleaners notified via **email / app**
 - Cleaners click **Apply** if interested
3. **Admin Review:**
 - Admin views Requested Jobs list
 - Sees list of applicants
4. **Assign Cleaner:**
 - Select cleaner(s)
 - Confirm assignment
5. **Post-Assignment:**
 - Job status updates → **Allocated**
 - Assigned cleaner receives confirmation
 - Job appears in Scheduled Jobs / Calendar module

This ensures **real-time visibility** for the admin, prevents overbooking, and creates a **clear workflow from requested → assigned → scheduled**.

8. Cleaner Character References Module

This module allows the **Super Admin / Admin** to view and manage character references submitted for cleaners. These references help verify a cleaner's background and suitability

before assignment to jobs. Each reference includes both **evaluation details** and **referee information**

8.1 Cleaner Reference Listing

Table / List View:

- Cleaner Name
- Cleaner Company / Affiliation (if any)
- Reference Status (Reviewed / Not Reviewed)
- Character Recommendation (Employable / Not Employable)

Actions Available:

- **View Details** → Opens full reference record
- **Search / Filter** → By Cleaner Name, Status, or Recommendation

Example Display:

Cleaner Name	Affiliation	Reference Status	Character Recommendation
Salina Begum	Jamtech Cleaner	Reviewed	Employable
Myra Baker	NewJTPL Cleaner	Reviewed	Not Employable

8.2 Reference Detail View (Cleaner Profile)

When admin clicks on a cleaner's reference, a **full detail page** is displayed.

Reference Details Include:

Character Review

- Recommendation: **Character OK / Not Employable**
- Reason (if applicable): e.g., *"Sometimes might be home and stay"*
- Other Comments: Any additional notes from the referee

Referee Information

- **Name:** e.g., Salina
- **Occupation:** e.g., G.C.H
- **Relationship to Cleaner:** e.g., Husband / Friend / Employer

- **Known Since:** e.g., 18/02/2002
- **Address:** e.g., Flat 6, 14 Trobridge Parade, Graham Park Way, London NW9 4AL
- **Mobile / Contact:** e.g., 078 566 89752

Signature Details

- **Signed By:** Referee's name (e.g., Salina)
- **Signed At:** Date of signing (e.g., 17 Dec 2025)
- **Signature Image / File:** Display scanned signature or uploaded image

8.3 Admin Actions / Functionalities

1. **View Reference**
 - Open any cleaner's reference to verify background and suitability
 - Display all relevant details in a readable format
2. **Approve / Flag Cleaner**
 - Based on character reference, admin can mark cleaner as:
 - Employable
 - Not Employable
3. **Search / Filter**
 - By Cleaner Name, Reference Status, Character Recommendation

8.4 Workflow

1. Cleaner submits a character reference form
2. System saves the reference under the cleaner's profile
3. Super Admin can search and review all references
4. Admin can **approve / flag** based on the information
5. Approved cleaners are eligible for jobs, flagged cleaners can be restricted

9. SMS Module

This module allows the Super Admin / Admin to send text messages (SMS) directly from the admin panel to cleaners, customers, or any other relevant contact. It can be used for job notifications, reminders, alerts, or general communication.

9.1 SMS Sending Form

Fields & Inputs:

1. **User (Optional)**
 - Dropdown to select a registered user (Customer or Cleaner)
 - Multi-select enabled for sending to multiple users at once
 - If no user is selected, admin can manually enter phone numbers
2. **Phone Number**
 - Input field for one or multiple numbers

- Supports international format
- Validates numbers before sending
- 3. **Message**
 - Text area to type the SMS content
 - Character counter to ensure it meets SMS length limits (e.g., 160 characters per SMS)
 - Optional support for dynamic placeholders (e.g., {CustomerName}, {JobID})

9.2 Admin Actions / Functionalities

1. **Send SMS**
 - Admin clicks **Send** button to deliver message immediately
 - System confirms successful delivery or displays error
2. **Preview**
 - Admin can preview message before sending
 - Ensures correct formatting and placeholders
3. **History / Logs**
 - Optional: System logs all sent messages for audit purposes
 - Columns may include:
 - Recipient Name / Number
 - Date & Time Sent
 - Message Content
 - Status (Sent / Failed)
4. **Notifications**
 - System can trigger SMS automatically for certain events, such as:
 - Job assignment
 - Job rescheduling
 - Cleaner confirmation of requested jobs

10. Assistants Module

Overview

The **Assistants Module** allows the **Super Admin / Admin** to manage assistant accounts. Assistants are staff members who support the admin in operations, communications, and monitoring the system. The module allows adding, editing, and managing assistants, including their access and activity status.

10.1 Assistants List / Management

Search / Filter

- By first name, last name, email, city, or status
- Quick search bar for real-time filtering

Actions Available

- **Edit:** Open assistant profile to update details
- **Delete / Restore:** Soft delete assistants or restore deleted accounts
- **Status Toggle:** Activate / deactivate assistants
- **Hide:** Hide assistant from certain views if needed

10.2 Add Assistant Form

Fields to be Entered:

1. **First Name** – Text input, required
2. **Last Name** – Text input, required
3. **Email** – Email input, required, unique
4. **Address** – Text input, optional
5. **City** – Text input, optional
6. **Postal Code** – Text input, optional
7. **Date of Birth** – Date picker, optional
8. **Phone Number** – Text input, optional
9. **Company / Organization** – Optional
10. **Extra Fields** – Optional (for any custom info)
11. **Email Subscriptions** – Checkbox, whether assistant receives system emails
12. **Verified** – Checkbox / toggle for verified accounts
13. **Student** – Checkbox if the assistant is a student
14. **Active** – Checkbox / toggle to mark account active
15. **Hide** – Checkbox to hide assistant from certain views

Actions

- **Save:** Create new assistant account
- **Cancel:** Discard changes

10.3 Workflow

1. Admin opens **Assistants Module**
2. Admin clicks **Add Assistant** → fills form → clicks **Save**
3. System validates inputs (e.g., email uniqueness) → creates account
4. Admin can edit details anytime or deactivate/delete if needed
5. The account can be linked to notifications, tasks, or other modules if required

11. Newsletters Module

Overview

The **Newsletters Module** allows the **Super Admin / Admin** to create and distribute newsletters to **customers, staff, or cleaners**. This feature is useful for sharing updates, promotions, announcements, or general communication with selected user.

11.1 Newsletter Creation Form

Fields & Inputs:

1. **Select Newsletter**
 - Dropdown to choose an existing newsletter or create a **New Newsletter**
2. **Title**
 - Text input for the newsletter subject or headline
 - Required field
3. **Content**
 - Rich text editor to enter the newsletter body
 - Supports **basic formatting** (bold, italics, links, lists)
 - Can include images or attachments if needed
4. **Assign to Customers**
 - Multi-select dropdown of registered customers
 - Allows sending newsletter to **one, multiple, or all customers**
5. **Assign to Staff / Cleaners**
 - Multi-select dropdown of staff/cleaners
 - Allows sending newsletter to **one, multiple, or all staff**

11.2 Admin Actions / Functionalities

1. **Save Draft**
 - Admin can save newsletter as draft to edit later
2. **Send Newsletter**
 - Distributes the newsletter to the selected recipients
 - System validates email addresses before sending
3. **Edit / Update**
 - Modify title, content, or assigned users before sending
4. **View Sent History**
 - Optional log showing:
 - Newsletter title
 - Recipients
 - Sent date & time
 - Delivery status (Sent / Failed)

11.3 Workflow Example

1. Admin clicks **New Newsletter**
2. Enters **Title** and **Content**
3. Selects recipients from **Customers** and/or **Staff / Cleaners**
4. Clicks **Send** → system sends newsletter via email
5. Admin can track delivery and view newsletter history

12. Work Eligibility & Permits Module

Overview

This module allows the **Super Admin / Admin** to manage **staff work eligibility, permits, and essential documents**. It ensures compliance by tracking document validity and alerting the admin when documents are nearing expiry.

12.1 Work Permits / Eligibility Table

Fields Displayed:

1. **Name** – Full name of the staff/cleaner
2. **Document Type** – Type of identification or permit (e.g., Passport, Driver License, Visa, Adhar Card)
3. **Document Number** – Unique number of the document
4. **Expiry Date** – Date the document expires
5. **Status** – Current validity:
 - **Valid**
 - **Expired**
6. **File / Upload** – Link to view or download the uploaded document

12.2 Admin Actions / Functionalities

1. **Search / Filter**
 - Search by staff name
 - Filter by **Status** (Valid, Expired, Expiring Soon)
 - Filter by **Document Type**
2. **View Document**
 - Admin can click to view/download the uploaded document
3. **Notifications**
 - Automatic alerts to admin when:
 - Document is **expiring soon** (e.g., 30 days before expiry)
 - Document has **expired**
 - Notifications can be displayed in the **Dashboard** and/or sent via **email/SMS**
4. **Add / Edit Document**
 - Optional: Admin can upload or update staff documents
 - Edit document type, number, and expiry date

12.3 Workflow Example

1. Staff uploads a new document (e.g., Passport) to the system
2. Admin sees the uploaded document in the **Work Permits Table**
3. System automatically flags any **documents expiring within X days**
4. Admin can click on the document to review details and take necessary actions
5. System sends **notification/email** to admin regarding expiring/expired documents

13. Payout Computation & Work Hours Module

Overview

This module enables Super Admin / Admin to calculate, view, and manage staff/cleaner payouts based on hours worked, service type, and billing period. The system allows filtering by date range, staff, and service type to make payouts simple, transparent, and accurate.

13.1 Hourly Rates

Admin can define rates for different job types:

- **Residential Rate (£)** – e.g., £12.5/hour
- **Commercial Rate (£)** – e.g., £12.5/hour

These rates are used to calculate total earnings per staff member automatically.

13.2 Staff Payout Summary Table

Fields Displayed:

Field	Description
Staff Name	Name of the cleaner/staff
Residential Rate	Hourly rate for residential jobs
Commercial Rate	Hourly rate for commercial jobs
Total Hours	Total hours worked during selected date range
Total Payout	Total earnings calculated based on hours & rates
Paid Amount	Amount already paid
Unpaid Amount	Outstanding amount to be paid
Action	Option to pay , view work details , or download report

Example Table:

Staff Name	Residential Rate	Commercial Rate	Total Hours	Total Payout	Paid Amount	Unpaid Amount	Action
Anca Plesanu	£12.5	£12.5	9.25 hrs	£115.62	£0.00	£115.62	Pay/View
Maria Santana	£12.5	£12.5	5.97 hrs	£74.58	£0.00	£74.58	Pay/View
Parminder	£12.5	£12.5	0 hrs	£0.00	£0.00	£0.00	-

13.3 Work Entries Detail

Admin can **filter by date range and staff** to view each work entry:

Fields:

Paid For	Staff Name	Hours Worked	Residential Rate	Commercial Rate	Amount	Residential Earnings	Commercial Earnings	Status	Paid Date
----------	------------	--------------	------------------	-----------------	--------	----------------------	---------------------	--------	-----------

Actions:

- **Mark Paid** – Admin can mark selected work entries as paid
- **Download Report** – Export CSV/PDF of work entries for payroll
- **Filter by Billing Type** – Residential / Commercial / All
- **Search Staff** – Quickly locate a specific staff member

Example:

| 01/10/2025 - 13/10/2025 | Jamtech Cleaner | 6.22 hrs | £0.00 | £12.50 | £77.71 | £0.00 | £77.71
 | Paid | 13/10/2025 |

13.4 Key Functionalities

1. **Date Range Selection**
 - Admin selects a **start date** and **end date** to view and compute payouts
 - System automatically sums hours worked and calculates earnings for the range
2. **Automated Calculations**

- Calculates **total residential & commercial earnings** per staff
- Displays **total payout, paid, and unpaid amounts**
- 3. **Clear Payment Interface**
 - Admin can pay cleaners directly from the module
 - Paid entries are automatically updated and reflected in totals
- 4. **Sorting / Filtering**
 - Sort by staff name, total payout, unpaid amount
 - Filter by billing type or individual staff
- 5. **Transparency**
 - Each work entry shows **hours worked, rate applied, total earned, and status**
 - Admin can view full details before marking payment

13.5 Workflow Example

1. Admin selects **date range**: 01/01/2026 – 31/01/2026
2. System calculates **total hours & payouts** for all staff
3. Admin clicks **View Work Entries** to verify individual job records
4. Admin clicks **Pay** for selected staff or entries
5. System updates **Paid Amount / Unpaid Amount** and records **paid date**

14. Training & Resources Module

The **Training & Resources Module** allows **Super Admin** to manage and provide **training materials** for staff, cleaners, and clients. This module centralizes **training videos, images, documents, and related details**, making it easy to assign, track, and access resources for different user roles.

14.1 Features

1. **Search & Filtering**
 - **Search by Title / Description** – Quickly locate specific training resources
 - **Target Audience Filter** – Filter by:
 - All
 - Staff / Cleaners
 - Clients
 - **Media Type Filter** – Filter by type of content:
 - Video
 - Image
 - PDF / Document
 - Other formats
2. **Training & Resources Library**
 - Displays a **list of all training resources** with key information
 - Fields Displayed:
 - **Title** – Name of the training resource
 - **Target Audience** – Who the resource is for

- **Media Type** – Video, Image, Document, etc.
- **Upload Date** – Date added to the system
- **Actions** – Edit / Delete / View

3. Add New Training Resource

- Admin can add new resources via a structured form

Fields for Adding Resource:

Field	Description
Title *	Name of the training resource (required)
Target Audience *	Dropdown to select intended audience: Staff / Cleaners / Clients (required)
Media Type *	Dropdown to select type: Video / Image / PDF / Other (required)
File *	Upload the actual file (required)
Description / Content	Optional detailed description or notes about the resource

Actions:

- **Upload / Save** – Validates required fields, stores the file, and adds record to the library
- **Edit Resource** – Update title, audience, media type, file, or description
- **Delete Resource** – Remove the resource from the library

14.2 Workflow

1. Admin clicks **Add Training & Resources Data**
2. Admin enters **Title**, selects **Target Audience**, chooses **Media Type**, uploads the file, and optionally adds a **description**
3. System validates the fields and saves the resource
4. Resource appears in the **Training & Resources Library** table
5. Staff / Cleaners / Clients can access relevant resources based on their role

14.3 Benefits

- **Centralized Training Content** – All resources in one place for easy access
- **Role-Specific Access** – Ensures staff, cleaners, and clients only see relevant materials
- **Media Flexibility** – Supports multiple types of training media (videos, images, PDFs, etc.)

- **Searchable & Filterable** – Quickly find resources without manual lookup
- **Editable & Updatable** – Keep training content current and relevant

15. Reviews Module

The **Reviews Module** allows the **Super Admin** to view and manage all customer feedback about cleaners. This module provides insights into performance, punctuality, professionalism, and overall satisfaction, helping the admin identify top-performing staff and areas for improvement.

15.1 Features

1. **Search & Filtering**
 - **Search by Cleaner Name** – Quickly locate reviews for a specific cleaner
 - **Filter by Rating** – Optional filter to see reviews by star rating (1–5)
 - **Filter by Date Range** – View reviews submitted within a specific timeframe
2. **Reviews Table**
 - Displays a **list of all reviews** with key details:

Field	Description
Property / Location	Name of the client property or job location
Cleaner	Cleaner assigned to the job
Client	Name of the client who submitted the review
Rating	Star rating given by the client (1–5 stars)
Arrived On Time	Yes / No
Wore Uniform	Yes / No
Completed On Time	Yes / No
Would Rehire	Yes / No
Comments	Optional text feedback submitted by the client
Submitted	Date the review was submitted

3. View Review Details

- Clicking a review opens a **detailed view** showing all fields above for easy reading
- Admin can see **comments, punctuality, uniform compliance, and overall performance**

15.2 Workflow

1. Customer completes a job and submits a review in the system
2. System stores the review and associates it with the **Cleaner, Job, and Client**
3. Admin can access **All Reviews** via the dashboard
4. Admin can:
 - **Search reviews by cleaner name**
 - **Filter reviews** by rating or date range
 - **Open individual review details** to see full client comments

15.3 Benefits

- **Performance Monitoring** – Allows admin to monitor cleaner performance objectively
- **Quality Assurance** – Quickly identify issues (late arrivals, incomplete jobs, etc.)
- **Client Feedback Tracking** – Maintains a record of client satisfaction for internal reports
- **Actionable Insights** – Helps in assigning jobs, rewarding top performers, or scheduling training

16. Customer Job Summary Module

This module provides the **Super Admin / Admin** with a **complete view of each customer's job history, work entries, and associated payouts**. It helps the admin track jobs, payments, and hours worked per customer, enabling accurate billing and reporting.

16.1 Customer Search & Filtering

- **Search by Customer Name** – Quickly locate a specific customer
- **Filter by Date Range** – View jobs completed within a specific timeframe
- **Filter by Job Status** – Paid / Unpaid / Pending

16.2 Customer Totals Table

This table gives a **summary for each customer**:

Field	Description
Customer Name	Full name of the customer

Total Jobs	Total number of jobs booked by the customer
Total Hours	Total number of hours worked across all jobs
Total Payout	Total amount owed or paid to staff for this customer
Action	Click to view detailed job list for the customer

Example:

Customer Name	Total Jobs	Total Hours	Total Payout	Action
Irmine Mason	15	45.0 hrs	£0.00	View Jobs
Julian Fraser	4	12.0 hrs	£0.00	View Jobs
Kevin Lawrence	16	32.0 hrs	£0.00	View Jobs

16.3 Jobs List (Per Customer)

Once the admin clicks **View Jobs** for a customer, a detailed table shows all work entries:

Field	Description
Customer Name	Name of the customer
Property	Address or property where the job took place
Start / End	Job start and end dates
Worked (hrs)	Total hours worked for this job
Hourly Rate	Rate applied (Residential or Commercial)

Payment Source	Indicates if the job was Residential or Commercial
Total Payout	Total payment due for the job
Status	Job payment status: Paid / Unpaid / Pending
Action	Admin can edit, mark as paid, or view full job details

Features:

1. **Pagination** – Jobs list can span multiple pages (Previous / Next)
2. **Date Range Selection** – Admin can filter job history by custom date ranges
3. **Job Status Update** – Admin can update payment status directly in the table
4. **Detailed Job Drill-Down** – Clicking a job opens a **full job detail view** including:
 - Assigned cleaners
 - Cleaning type
 - Special instructions
 - Equipment / products provided
 - Work hours logged

Example Job Table (Customer: Irmine Mason):

Property	Start	End	Worked (hrs)	Hourly Rate	Payment Source	Total Payout	Status	Action
48 Deacons Hill Road	09/09/2025	09/09/2025	3.00	£0.00	N/A	£0.00	Unpaid	View
48 Deacons Hill Road	02/09/2025	02/09/2025	3.00	£0.00	N/A	£0.00	Unpaid	View
48 Deacons Hill Road	16/09/2025	16/09/2025	3.00	£0.00	N/A	£0.00	Unpaid	View

16.4 Workflow

1. Admin searches for a customer or selects from **Customer Totals Table**
2. Admin views the **summary** including total jobs, hours, and payout
3. Admin clicks **View Jobs** to see **detailed job entries**
4. Admin can filter by **date range or job status** to narrow results
5. Admin can **update payment status** or view full details for each job

16.5 Benefits

- **Centralized Customer Records** – All job and payout info in one place
- **Billing Transparency** – Easy tracking of unpaid / paid jobs
- **Performance Tracking** – See customer usage patterns (number of jobs, hours)
- **Quick Action** – Mark jobs as paid, adjust hours, or review job details without leaving the panel

17. Notifications Module

The Notifications Module provides real-time alerts to the admin about important events in the system. This ensures that the admin is always aware of job updates, staff activity, scheduling conflicts, approvals, and completions.

17.1 Notifications List

- **Display:** A chronological list of notifications
- **Status:** Each notification is marked as **Read** or **Unread**
- **Content:** Each notification includes:
 - Event type (Job approved, Job started, Job completed, Job conflict, etc.)
 - Job property or customer name
 - Cleaner assigned (if applicable)
 - Timestamp of the event

17.2 Types of Notifications

1. **Job Approvals**
 - Triggered when a cleaner approves a job assignment
 - Example: *“Job at 'Mohamed - 180-182 Tottenham Court Road' approved by Cleaner”*
2. **Job Status Updates**
 - Triggered when a job is started, in progress, or completed
 - Example: *“Job at 'Rajvar- 20 Grosvenor Gardens' is now in progress”*
 - Example: *“Job at '77a St Marks Road' has been completed”*
3. **Scheduling Conflicts**
 - Triggered when a cleaner cannot take a job due to overlapping schedule

- Example: *“Cleaner 'Prabhdeep' already has jobs scheduled at the same time and cannot take Job. Please assign another cleaner.”*

4. **Administrative Alerts**

- Can include system warnings, user verification issues, document expirations, or other urgent items
- Example: Notification for **expired work permit or visa** uploaded by staff

17.3 Functional Features

1. **Mark as Read / Unread**

- Admin can mark notifications as read after reviewing them
- Unread notifications appear highlighted

2. **Real-Time Updates**

- Notifications should appear automatically without page refresh (via WebSocket or polling)

3. **Filtering and Searching**

- Filter notifications by **type**: Job Status, Approval, Conflict
- Search by **Cleaner name, Customer name, or Property**

4. **Notification Details**

- Clicking on a notification should open relevant **job or staff detail view** for quick action
- Example: Clicking “Job approved by Cleaner” opens the job assignment and allows admin to reassign or confirm

5. **Email / Push Notifications (Optional)**

- Admin can receive key notifications via **email or mobile push** for urgent alerts

17.4 Workflow

1. A job is created or updated by the admin or a cleaner.
2. System triggers notifications based on the action type (approval, start, completion, conflict).
3. Admin sees the notification in real time in the panel.
4. Admin can click the notification to **act** or mark it as **read**.
5. System maintains **history of notifications** for auditing.

17.5 Benefits

- **Instant Visibility:** Admin is always informed of system events
- **Conflict Prevention:** Quickly resolves scheduling conflicts
- **Audit Trail:** Maintains a history of all events for accountability
- **Actionable:** Direct access to jobs, customers, and staff profiles from notifications

18. Admin Profile Module

The **Profile Module** allows the admin to view and manage their personal information, security settings, and notification preferences. This ensures that the admin's account is up-to-date, secure, and personalized.

18.1 Profile Information

- **Profile Completion:** Displays a percentage indicating how complete the profile is (e.g., 100%)
- **Personal Details:**
 - **First Name / Last Name** – Admin can edit their name
 - **Email Address** – Primary contact email
 - **Phone Number** – Contact number with country code
 - **Address / City / Postal Code** – Physical location
 - **Date of Birth** – Admin's birthdate
 - **Gender** – Male / Female / Other

18.2 Security Settings

- **Change Password:** Admin can update their password securely.
 - Requires current password verification
 - Password strength validation (minimum 8 characters, mix of letters, numbers, and symbols)

18.3 Notification Preferences

- **Enable reminders via Email / SMS:**
 - Admin can toggle notifications for system alerts, job reminders, or other important updates.
 - Settings are saved per admin account and reflected in the Notifications Module.

18.4 Functional Features

1. **Edit Personal Details**
 - Admin can update profile fields and save changes
 - Changes immediately reflect in system communication (emails, SMS, job assignments)
2. **Password Management**
 - Change password form with **confirm password field**
 - Security validation ensures strong password policies
3. **Profile Completion Indicator**
 - Dynamic progress bar showing percentage completion
 - Encourages admin to complete all optional fields for better system integration
4. **Integration with Notifications**
 - Notification reminders are linked to email and SMS preferences
 - Admin receives only the selected type of notifications

18.5 Benefits

- Ensures accurate admin contact information
- Enhances account security with password management
- Provides clear control over how the admin receives notifications
- Profile completion tracker encourages full setup for optimal system usage

B. CLEANER MOBILE APP

Role: Cleaner / Service Provider

Platform: Mobile App (Android / iOS)

Entry Point: “Want to Become a Cleaner” CTA

1. Cleaner App – Step 1: Onboarding & Verification

1.1 Entry Point – Become a Cleaner

- **Landing Screen:**
 - New users see a **“Want to Become a Cleaner”** button
 - Clicking this button starts the Cleaner onboarding flow
- **Purpose:**
 - Filter serious applicants
 - Ensure legal compliance
 - Collect verified identity before platform access
- **System Behavior:**
 - Redirects user to the onboarding module
 - Displays a brief introduction explaining the steps: Assessment → Government Verification → Verification Code

1.2. Assessment Step

- **Mandatory Assessment:**

- Every new cleaner must complete this step
- Purpose: Ensure quality, eligibility, and basic knowledge

- **Assessment Content:**

1. **Basic Cleaning Knowledge:** Tools, procedures, and techniques
2. **Safety Awareness:** Handling chemicals, equipment safety, hygiene
3. **Service Expectations:** Punctuality, client interaction, professionalism

- **System Behavior:**

- Timer optional
- Results determine if the cleaner can proceed
- Failure shows feedback; retry allowed after cooldown

- **Outcome:**

- **Pass:** Moves to government verification
- **Fail:** Cannot proceed until passing

1.3. Government Verification

- **Purpose:**

- Validate identity and work eligibility
- Prevent fraud and ensure compliance

- **Process:**

1. Cleaner redirected to an official government verification site
2. Fills required personal/legal details (ID, passport, work permit, etc.)
3. Government system generates a verification code

- **System Behavior:**

- App shows instructions and link to government site
- Progress indicator marks step as “**Verification Pending**”

1.4. Verification Code Submission

- **Process:**

1. Cleaner returns to the app after completing government verification
2. Enters the government-issued verification code in the app
3. System validates the code against backend or government API

- **Success Result:**

- Cleaner is verified

- Allowed to continue to full registration
- **Failure Handling:**
 - Invalid or expired codes trigger retry option
 - Admin notified if repeated failures occur

2. Cleaner Registration & Authentication

This module handles the cleaner's **full registration**, **identity verification**, and **first-time login**. The system ensures that only verified and qualified cleaners can access the platform.

2.1 Sign-Up Form

- Collect verified personal, work, and banking information for platform use
- Enable future payroll, scheduling, and communications
- Ensure compliance with legal and operational requirements

Form Sections

1. Personal Information

- **First Name:** Text input, required
- **Last Name:** Text input, required
- **Email:** Valid email input, required
- **Phone Number:** Valid mobile number, required
- **Address:** Text input, required
- **City:** Text input, required
- **Postal Code:** Text input, required
- **Date of Birth:** Date picker, required
- **National Insurance Number:** Text input, format AA123456C, required

2. Next of Kin Details

- **Full Name:** Text input, required
- **Relationship:** Dropdown (e.g., Parent, Sibling, Aunt, Friend)
- **Contact / Mobile Number:** Valid phone number, required

3. Work Information

- **Preferred Start Date:** Date picker, required
- **Do you drive?** Radio button (Yes/No)
- **Local Areas Willing to Work:** Multi-select input
- **Do you have children?** Radio button (Yes/No)
- **Cleaning Services Capability:** Checklist for areas of expertise
 - **Kitchen Area:** Remove cobwebs, wipe fridge inside/outside, clear rubbish, wash dishes, disinfect surfaces/floor, clean cupboards, wash sink, vacuum/mop floor
 - **Bathroom / Toilet:** Remove cobwebs, wash tiles, wipe shelves/mirrors, clear rubbish, descale W/C, vacuum/mop floor, wash sink, clean doors

- **Bedroom / Living Room:** Remove cobwebs, clear rubbish, wipe TV stand, clean doors/windows/furniture, wipe skirting boards/radiators, vacuum/mop carpet/floor
 - **Ironing Services:** Shirts, bed linens, clothing items
- 4. **Banking Details**
 - **Bank Name:** Text input, required
 - **Account Holder Name:** Text input, required
 - **Account Number:** Text input, required
 - **Sort Code:** Text input, required
- 5. **Account & Security**
 - **Gender:** Dropdown (Male / Female / Other)
 - **Password:** Password input, required
 - **Verification Code:** Pre-validated government-issued code from Step 1

2.2 OTP Verification

Purpose

- Prevent fake accounts
- Confirm cleaner has a reachable and valid mobile number

Flow

1. OTP sent automatically to the registered mobile number
2. Cleaner enters OTP in the app
3. System validates the OTP against backend
 - **Success:** Cleaner proceeds to first login
 - **Failure:** Retry allowed up to a specified limit
 - **Timeout / Expired OTP:** Request new OTP

2.3 First Login → Dashboard Access

Purpose

- Seamless transition from registration to active platform use

Flow

1. After OTP verification, cleaner is **automatically logged in**
2. Cleaner is redirected to the **Cleaner Dashboard**
 - Dashboard shows upcoming jobs, schedules, notifications, and earnings summary
3. Cleaner can **update profile, add services, and manage availability**

3. Cleaner First Login & Profile Setup (App)

3.1 Welcome Popup (First-Time Login Only)

When it appears

- Displayed immediately after a cleaner logs in for the first time
- Shown only once, until all required setup steps are completed

Popup Content

- **Title:** Welcome, [Cleaner Name] 🚀
- **Message:** Follow these quick steps to get started with Colossians Cleaning Services
- **Action Buttons / Links:**
 1. Complete Profile (*highlighted if incomplete or email not verified*)
 2. Add Available Slots
 3. Upload Documents
 4. View Calendar

Behavior

- Clicking **Complete Profile** redirects to the cleaner's profile page
- Popup may include "Remind Me Later", but system continues to show reminders until setup is finished
- Admin can see profile completion status from admin panel

3.2 Complete Profile (Cleaner Profile Management)

This section allows cleaners to manage **personal, legal, work, and payment details**. Profile completion is mandatory before receiving jobs.

3.2.1 Personal Information

- First Name
- Last Name
- Phone Number
- Email (*read-only; message shown: "To update your email, contact support@colossianscleaningservices.com or 07368914755"*)
- Address
- City
- Postal Code
- Date of Birth
- Gender
- Enable reminders via Email / SMS (toggle)
- Change Password option

3.2.2 Immigration & Legal Details

- Immigration Status (dropdown)
- **National Insurance Number OR Share Code (one required)**
 - NIN format: 2 letters + 6 digits + 1 letter (e.g. AB123456C)
- Are you a student? (Yes / No)

3.2.3 Next of Kin Details

- Full Name
- Relationship
- Contact / Mobile Number

3.2.4 Work Details

- Do you drive? (Yes / No)
- Local working areas (multi-select)
- Do you have children? (Yes / No)
- Employment Start Date (date picker)

3.2.5 Cleaning Services Selection

Cleaner selects services they are willing and trained to perform.

Kitchen Area

- Remove cobwebs
- Wipe fridge inside / outside
- Wipe working surfaces
- Clear rubbish (containers, expired food)
- Wash dishes
- Disinfect surfaces and floors
- Wash cupboards inside / outside
- Wash sink
- Vacuum and mop floor

Bathroom / Toilet

- Remove cobwebs
- Wash tiled walls
- Wipe shelving units / mirror cabinet
- Clear rubbish
- Descale WC
- Wash sink
- Vacuum and mop floor
- Wash doors (front & back with frames)

Bedroom / Living Room

- Remove cobwebs
- Clear rubbish
- Wipe TV and stands
- Wash doors with frames
- Clean windows inside with frames
- Wipe furniture and window sills
- Wipe skirting boards
- Wipe radiators
- Vacuum or mop floors

Ironing Services

- Iron shirts
- Iron bed linens
- Iron clothing items

3.2.6 Bank Details

- Bank Name
- Account Holder Name
- Account Number
- Sort Code

3.2.7 Account Actions

- Delete My Account option

3.3 Availability, Documents & Final Setup

3.3.1 Available Slots (Working Hours)

- Weekly schedule (Monday–Sunday)
- Each day includes:
 - From time
 - To time
- Cleaners can block unavailable days/hours
- Blocked times prevent job assignment automatically

Unavailable Days & Hours

- Initially empty
- Cleaner can add/edit anytime

3.3.2 Document Upload & Verification

Cleaner uploads all required supporting documents.

Document Upload Fields

- Document Type (Passport, Visa, DBS, Proof of Address, etc.)
- Document Number
- Expiry Date
- Upload File (PDF / JPG / PNG)

Uploaded Documents List

- Displays:
 - Document name
 - Document number
 - Expiry date
 - View file option

System Behavior

- Admin is notified when documents are uploaded
- Expiry reminders sent to cleaner and admin
- Expired documents flagged automatically

3.3.3 Completion Rules

- Cleaner cannot receive or accept jobs until:
 - Profile is completed
 - Availability is added
 - Mandatory documents are uploaded and valid
- Once completed:
 - Cleaner gains full dashboard access
 - Jobs can be viewed, accepted, and managed

4. Cleaner Dashboard – Calendar (Default Landing Screen)

4.1 Calendar as Default Landing Page

- After successful login, the cleaner is **automatically redirected to the Calendar screen**
- The calendar serves as the **primary dashboard** for the cleaner
- No intermediate home screen is shown to avoid confusion and speed up access to work schedules

Purpose

- Give cleaners immediate visibility of:
 - Today's jobs
 - Upcoming assignments
 - Job status (Approved / Pending)

- Ensure cleaners always know **when and where they are working**

4.2 Profile Completion Status Indicator

- A profile completion progress bar is displayed at the top (e.g. **96% Complete**)
- Missing mandatory information is clearly highlighted (e.g. *Immigration Status*)
- Clicking the warning redirects the cleaner directly to the required profile section

System Behavior

- Cleaner can view the calendar even if the profile is incomplete
- Certain actions (job acceptance or payouts) may be restricted until required fields are completed

4.3 Calendar View & Job Display

- Default view loads the **current month**
- Calendar displays jobs on their assigned dates
- Each job entry shows:
 - Job / Property name
 - Time slot (start – end)
 - Client name
 - Short address
 - Job status badge (Approved / Pending)

4.4 Job Status & Interaction

- Approved jobs are clearly marked as confirmed
- Pending jobs indicate admin or system approval is required
- Cleaner can tap on any job to:
 - View full job details
 - See location and instructions
 - Perform allowed actions (accept, start, complete)

4.5 Filters & Navigation Controls

- Cleaner can filter calendar jobs by:
 - Property name
 - Job status
- Filters apply instantly without leaving the calendar
- Cleaner can navigate between months using swipe or arrows

4.6 Availability & Scheduling Logic

- Calendar respects:
 - Cleaner's available working hours

- Blocked/unavailable slots
- System prevents:
 - Double booking
 - Jobs outside declared availability

4.7 Real-Time Updates

- Calendar updates in real time when:
 - New jobs are assigned
 - Job status changes
 - Jobs are rescheduled or cancelled
- Recurring jobs appear as separate calendar entries

5. My Jobs & Job Execution Flow (Cleaner App)

This module defines how cleaners view assigned jobs, manage job execution, and track working time accurately, ensuring transparent payouts and operational control.

5.1 My Jobs Listing (Cleaner View)

Provide cleaners with a clear, chronological list of all assigned jobs and their current status.

Access

- Cleaner Dashboard → **My Jobs**

Displayed Job Information

Each job row displays:

- Property name / address
- Job date
- Job status:
 - Pending
 - Approved
 - In Progress
 - Completed
- Start time & end time (scheduled)
- Review status (Reviewed / Not Reviewed)
- Check-in date & time
- Check-out date & time

Filtering Options

- All Jobs (default)
- Upcoming Jobs

- Completed Jobs
- Pending Approval

Interaction

- Cleaner taps/clicks a job → redirected to **Job Detail & Execution Screen**

5.2 Job Detail Screen (Pre-Execution View)

Purpose

Give cleaners full clarity about the job before starting work.

Job Information Displayed

- Client name
- Property address, city, postal code
- Job date
- Scheduled start and end time
- Property type (Residential / Commercial)
- Property subtype (e.g., Office communal area)
- Cleaning type (if applicable)
- Animals on property (Yes / No)
- Staff preference (if any)
- Equipment availability:
 - Hoover
 - Cleaning products
 - Washing machine
 - Dryer
- Access instructions (e.g., keys, reception, code)
- Additional notes from admin/client
- Payment source (Residential or Commercial)

5.3 Job Check-In Process

Eligibility Rules

- Cleaner **can check in only up to 15 minutes before scheduled start time**
- Example:
 - Job start: 18:00
 - Earliest check-in allowed: 17:45

System Behaviour

- If cleaner attempts early check-in:
 - System blocks action

- Shows validation message
- Check-in button becomes active only within allowed time window

Check-In Requirements

- Cleaner must:
 - Upload **“Before Job” photos**
 - Confirm check-in action

Data Captured

- Server-generated check-in timestamp
- Uploaded images (stored securely)
- Job status updated to **In Progress**

5.4 Job Check-Out Process

Eligibility Rules

- Cleaner **cannot check out before scheduled job end time**
- Check-out is enabled:
 - Only after end time has passed
 - Only if check-in was completed

Check-Out Requirements

- Upload **“After Job” photos**
- Confirm job completion

Data Captured

- Server-generated check-out timestamp
- Uploaded completion images
- Job status updated to **Completed**

5.5 Worked Time & Overtime Tracking

Automatic Time Calculation

The system calculates:

- $\text{Scheduled duration} = \text{Scheduled End} - \text{Scheduled Start}$
- $\text{Actual worked duration} = \text{Check-Out Time} - \text{Check-In Time}$

Extra Time Detection

- If actual worked time exceeds scheduled time:

- Extra minutes are recorded as **Additional Worked Time**

Stored Time Data

- Scheduled start & end time
- Actual check-in & check-out timestamps
- Total worked hours
- Extra time (if any)

5.6 Admin Payout & Reporting Integration

Admin Visibility

For every job, admin can view:

- Scheduled hours
- Actual worked hours
- Extra time worked
- Check-in / check-out timestamps
- Before & after photos

Payout Accuracy

- Base payout calculated using scheduled hours
- Extra worked time:
 - Automatically added **or**
 - Flagged for admin approval (configurable)
- Ensures:
 - Accurate payroll
 - No manual correction
 - Full transparency

6. Availability & Working Hours Management (Cleaner App)

This feature allows cleaners to **define their regular working availability** and **temporarily block specific hours or days**, ensuring accurate job assignment and preventing scheduling conflicts.

6.1 Available Slots (Weekly Working Schedule)

Purpose

Enable cleaners to set their **standard weekly working hours**, which the system uses to:

- Match jobs correctly
- Prevent assigning jobs outside availability
- Improve scheduling efficiency

Access

Cleaner Dashboard → **Available Slots**

Weekly Availability Setup

Cleaner can define availability for each day:

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunday

For each day:

- **From time**
- **To time**

Behaviour Rules

- Time fields are optional per day
- If a day is left empty:
 - Cleaner is considered unavailable that day
- Multiple days can share the same working hours
- Changes are saved immediately or via explicit “Save” action (implementation choice)

System Usage of Availability

- Jobs are assigned **only within defined time slots**
- Cleaner cannot be assigned overlapping jobs
- Availability is referenced during:
 - Manual admin assignment
 - Automated scheduling (future-ready)

6.2 Manage Working Hours – Block Hours / Days

Purpose

Allow cleaners to temporarily mark themselves unavailable without changing their regular weekly schedule.

Used for:

- Personal leave

- Medical appointments
- Travel
- Emergencies

Blocked Time Configuration

Cleaner can add blocked periods using **Add Block Hours/Days** form:

Fields:

- Start Date
- End Date
- Start Time
- End Time
- Reason (optional but recommended)

Blocking Logic

- Can block:
 - A few hours on a single day
 - Multiple full days
 - A date range with specific time windows
- Blocked periods override weekly availability

Unavailable Days & Hours List

- Displays all upcoming blocked periods
- Shows:
 - Date range
 - Time range
 - Reason (if provided)
- Default state:
 - “No unavailable times yet”

Cleaner can:

- View blocked entries
- Remove or edit future blocks

6.3 Scheduling & Conflict Prevention Logic

System Behaviour

- No jobs can be assigned during blocked times
- If a job overlaps:
 - System blocks assignment

- Admin is prompted to choose another cleaner

Edge Case Handling

- If cleaner blocks time after job is assigned:
 - Admin is notified
 - Job flagged for reassignment (policy-based)

6.4 Admin Visibility & Control

Admin Access

Admin can view:

- Cleaner's weekly availability
- All blocked hours/days
- Reason for unavailability (if provided)

Operational Benefits

- Prevents last-minute cancellations
- Improves workforce planning
- Reduces scheduling conflicts

7. References Management (Cleaner App)

This feature allows cleaners to **add personal or professional references**, which can be reviewed by the admin team for background verification and trust assessment.

7.1 References Overview

Purpose

- Collect character or work references from cleaners
- Support cleaner verification and quality assurance
- Provide admin with verifiable third-party information

Cleaner View

Cleaner Dashboard → **User References**

Default state:

- Displays message: **"No references added yet."**

Cleaner can:

- View existing references
- Add new references
- Edit or remove references (before admin approval, if enabled)

7.2 Add Reference Form

Cleaner clicks “**Add Reference**” and is presented with a structured form.

Reference Information Fields

Personal Details

- First Name *
- Last Name *
- Email *
- Phone Number *
- Company Name (optional)

Relationship

- Relationship *
 - Dropdown selection (e.g.):
 - Employer
 - Supervisor
 - Colleague
 - Client
 - Family Member
 - Friend
 - Other

Form Validation Rules

- Mandatory fields must be completed
- Email format validation
- Phone number format validation
- Relationship selection required

7.3 Reference Submission Flow

1. Cleaner fills in reference details
2. Cleaner submits the form
3. Reference is saved with status:
 - **Pending Review**
4. Reference appears in cleaner’s list view

Optional (future-ready):

- Automated email sent to reference for confirmation

7.4 Admin Review & Verification

Admin Panel Capabilities

Admin can:

- View all references linked to a cleaner
- See:
 - Full reference details
 - Relationship type
 - Submission date
- Approve or reject references
- Add internal notes (optional)

Admin Use Cases

- Character verification
- Employment history confirmation
- Risk reduction before job assignment

7.5 Security & Privacy Considerations

- Reference data visible only to:
 - Cleaner (own references)
 - Admin users
- No public exposure of reference information
- Data stored securely and access-controlled

8. Document Upload & Verification (Cleaner App)

This feature allows cleaners to upload, manage, and maintain mandatory legal and identity documents, ensuring compliance and eligibility to work on the platform.

8.1 Document Upload Overview

Purpose

- Verify cleaner identity and legal work eligibility
- Maintain compliance with local regulations
- Enable admin monitoring and expiry tracking
- Prevent job allocation to unverified or expired cleaners

Cleaner View

Cleaner Dashboard → **Your Supporting Documents**

Displayed elements:

- List of uploaded documents
- Document status (Valid / Expired / Pending Review)
- Expiry dates
- “View file” option
- Button to **Add New Document**

8.2 Add New Document Flow

Cleaner clicks “**Add New Document**” and completes the upload form.

Document Upload Form Fields

- **Document Type*** (Dropdown)
 - Passport
 - Visa
 - DBS
 - Proof of Address
 - Driver License
 - Other (configurable)
- **Document Number***
(e.g. Passport number, Visa number, DBS reference)
- **Expiry Date***
 - Date picker
 - Mandatory for time-bound documents
 - Optional or disabled for non-expiring documents (configurable)
- **File Upload***
 - Accepted formats: PDF, JPG, PNG
 - Size limits enforced
 - Single or multi-page upload (as required)

Validation Rules

- All required fields must be completed
- Expiry date must be a future date
- File must meet format and size constraints
- Duplicate document type rules enforced if required (e.g. only one active passport)

8.3 Uploaded Documents List

After submission, documents appear in the list view:

Example entries:

- **Passport**

- Document No: A13176177
- Expiry: 04/05/2028
- Status: Valid
- Action: View file
- **Proof of Address**
 - Accepted documents:
 - Bank statements
 - Tenancy agreement
 - Telephone bill
 - Council tax bill
 - Status: Pending / Approved
- **Visa**
 - Document No: WC4 889 5NB
 - Expiry: 17/09/2026
- **DBS**
 - Document No: 001942917792
 - Expiry: 04/10/2026

8.4 Admin Review & Compliance Controls

Admin Panel Capabilities

Admin can:

- View all documents per cleaner
- Download or preview files
- Approve or reject documents
- See expiry dates clearly
- Add internal notes if needed

Expiry Monitoring

- System tracks expiry dates automatically
- Admin receives notifications when:
 - A document is near expiry
 - A document has expired

Optional:

- Cleaner receives reminders via email / SMS before expiry

8.5 Job Eligibility Enforcement

System behavior:

- Cleaners with:

- Missing mandatory documents
- Expired documents
- Rejected documents
- **Cannot be assigned or accept jobs**

Visual indicators:

- Profile completion percentage reduced
- Warning banners shown in cleaner dashboard

8.6 Security & Data Handling

- Documents stored securely (private storage)
- Access restricted to:
 - The cleaner (own documents)
 - Authorized admin users only
- No public or cross-cleaner access
- Audit log maintained for uploads and approvals

9. Reviews & Feedback Management

This feature enables customers to review cleaners after job completion, while allowing admins and cleaners to view structured feedback for quality control, performance tracking, and service improvement.

9.1 Review Submission (Customer Side)

Trigger

- Review is enabled **only after a job is completed**
- One review per job (no duplicates)

Review Form Fields

Customer submits the following:

- **Cleaner Name** (Auto-filled)
- **Job / Property Name** (Auto-filled)
- **Rating**
 - 1 to 5 stars
- **Operational Checks (Yes / No)**
 - Arrived on time
 - Wore uniform
 - Completed on time
 - Would rehire
- **Comments (Optional)**

- Free-text feedback
- Supports partial or full comments

Validation Rules

- Rating is mandatory
- Job must be completed
- Review can be edited only within a limited time window (optional)

9.2 Admin Review Dashboard

Admin View: All Reviews

Admin panel displays reviews in a searchable list:

Displayed Data

- Property / Job Name
- Cleaner Name
- Client Name
- Star Rating
- Yes / No indicators:
 - On-time arrival
 - Uniform worn
 - Job completed on time
 - Rehire preference
- Customer comments
- Review submission date

Admin Capabilities

- Search reviews by:
 - Cleaner name
 - Property
 - Client
- Monitor low ratings (1–2 stars)
- Identify repeated issues per cleaner
- Use reviews for:
 - Quality audits
 - Cleaner approval decisions
 - Dispute resolution

9.3 Cleaner Review Visibility

Cleaner Dashboard

- Cleaner can view **only their own reviews**
- Reviews are read-only for cleaners

Displayed information:

- Job / Property name
- Rating
- Customer comments
- Submission date

Restrictions:

- Cleaner **cannot edit or delete reviews**
- No visibility of other cleaners' reviews

10. Payout Computation & Work Hour Calculation

This feature calculates **accurate cleaner payouts** based on **actual worked hours**, job type, and approved time records. It ensures transparency for cleaners and precise payroll control for admins.

10.1 Purpose & Scope

The payout system is designed to:

- Track **actual working hours** (not just scheduled hours)
- Separate **Residential** and **Commercial** earnings
- Prevent manual calculation errors
- Support date-based payroll cycles
- Ensure admin-approved payments only

10.2 Date Range Selection

Cleaner View

- Cleaner selects a **date range**:
 - From Date
 - To Date
- System fetches **only completed jobs** within the selected period

Rules

- Only jobs with **successful check-in and check-out** are counted
- Pending or cancelled jobs are excluded
- Future jobs are never included

10.3 Work Hour Calculation Logic

Source of Truth

- Hours are calculated using:
 - **Actual Check-In Time**
 - **Actual Check-Out Time**

Rules

- Cleaner can:
 - Check in **only 15 minutes before job start time**
 - Check out **only after scheduled end time**
- If cleaner works extra:
 - Extra time is **automatically calculated**
 - Extra hours are included in payout
- Manual time entry is **not allowed**

10.4 Rate Application

Each job is classified as one of the following:

- **Residential Job**
 - Uses Residential hourly rate
- **Commercial Job**
 - Uses Commercial hourly rate

Rates are:

- Defined by admin
- Stored per cleaner (if applicable)
- Locked at job completion to prevent retroactive changes

10.5 Work Entries Detail Table

Displayed per cleaner after date selection:

Columns

- Paid For (Date Range)
- Hours Worked
- Residential Rate
- Commercial Rate
- Total Amount
- Residential Earnings
- Commercial Earnings
- Payment Status (Paid / Unpaid)
- Paid Date (if paid)

If no data exists:

“No records found”

10.6 Earnings Summary (Auto-Calculated)

System shows real-time totals:

- **Total Residential Earnings**
- **Total Commercial Earnings**
- **Total Payout**

These values are:

- Calculated automatically
- Read-only for cleaners
- Updated instantly when date range changes

10.7 Payment Status Flow

Statutes

- **Unpaid**
 - Default after job completion
- **Paid**
 - Set by admin after payout is processed

Important Rules

- Cleaner **cannot mark jobs as paid**
- Admin action is mandatory to update payment status
- Once marked Paid:
 - Status is locked
 - Paid date is recorded
 - Entry becomes non-editable

10.8 Admin Controls (Backend Logic)

Admin can:

- View cleaner-wise payout summaries
- Filter by:
 - Cleaner
 - Date range
 - Job type
- Verify:
 - Worked hours

- Extra time
 - Overlapping jobs
- Process payouts
- Mark records as Paid

10.9 Accuracy & Compliance Safeguards

- Overlapping jobs are blocked automatically
- Time manipulation is prevented via:
 - Time window restrictions
 - Server-side validation
- All payout data is audit-ready
- Historical payouts remain immutable.

10. Notifications Management (Cleaner App)

10.1 Purpose & Overview

The Notifications module ensures that cleaners are instantly informed about all job-related activities, assignments, and system updates. This feature acts as a centralized communication layer between the admin system and the cleaner, improving reliability, responsiveness, and accountability.

Notifications are displayed in real time and stored for future reference.

10.2 Notification Types

The system will generate notifications for the following scenarios:

- Job assignment to a cleaner (Residential / Commercial)
- Job reassignment or update
- Schedule changes (date, time, or location)
- Check-in / check-out confirmations or issues
- Payout-related updates (calculated, approved, paid)
- System alerts or important announcements from admin

Each notification clearly mentions:

- Job name or location
- Customer name
- Notification message content
- Date & time of notification

10.3 Notification List View

Cleaners can view all notifications in a dedicated **“All Notifications”** screen with:

- Chronological listing (latest first)
- Status indicator:
 - **Unread**
 - **Read**
- Timestamp (date & exact time)
- Repeated notifications allowed for multiple assignments or retries

Example format:

Cleaner notification: You have been assigned to a job at 'XC02 office cleaning' (Customer: Wesley)

10.4 Read / Unread Tracking

- Newly received notifications are marked as **Unread** by default
- Once the cleaner opens or taps a notification, it is marked as **Read**
- Unread notifications should be visually highlighted
- Backend must store read/unread state per cleaner

10.5 Real-Time Delivery

- Notifications should be delivered instantly using:
 - Push notifications (mobile)
 - In-app notification updates
- If the cleaner is offline, notifications must sync when they come back online
- Duplicate notifications may occur for repeated assignments and should not overwrite previous records

10.6 Admin Control & Logging

- Admin system triggers notifications automatically based on events
- All notifications must be logged in the backend for auditing
- Admin should be able to see whether a notification was delivered and read

10.7 Developer Notes

- Notifications must be tied to:
 - Cleaner ID
 - Job ID (if applicable)
- Timezone handling should be consistent with system settings
- Notification data should be reusable for reports and activity logs

11. Training & Resources (Cleaner App)

11.1 Purpose & Overview

The Training & Resources module provides cleaners with access to essential learning materials, guidelines, and reference content required to perform their duties correctly and consistently. This feature helps ensure service quality, compliance, and onboarding readiness without requiring direct admin intervention each time.

All materials are centrally managed by the admin and consumed by cleaners within the app.

11.2 Content Types

The system should support multiple training and resource formats, including:

- Documents (PDF, DOC)
- Images
- Video tutorials
- Instructional guides
- Policy or compliance documents

Each resource will contain:

- Title
- Description
- Media type
- Upload date
- Status (Seen / Unseen)

11.3 Resource Listing Screen

Cleaners can access all learning materials from the **Training & Resources** screen, which displays:

- Total resources count
- Seen resources count
- Unseen resources count
- List of all available materials

Resources should be displayed in a structured list or card layout with clear labels.

11.4 Seen / Unseen Tracking

- Newly added resources are marked as **Unseen** by default
- Once a cleaner opens or views a resource, it is marked as **Seen**
- Seen / Unseen status must be stored per cleaner
- Counters (Unseen / Seen / Total) should update dynamically

11.5 Search Functionality

Cleaners can search resources using:

- Title
- Description keywords

Search should be real-time and work across all resource types.

11.6 Media Type Filter

A **Media Type Filter** allows cleaners to refine content by:

- All
- Video
- Document
- Image
- Other supported formats

Filter selection should instantly update the resource list.

11.7 Admin Management (Backend Scope)

- Admin can upload, update, or remove training materials
- Admin can define visibility (global or cleaner-specific if required)
- Admin can track which cleaners have viewed specific resources

12. Profile Management (Cleaner App)

12.1 Purpose & Overview

The Profile module allows cleaners to view and manage their personal, professional, and financial information within the app. This data is critical for identity verification, compliance, job allocation, payroll processing, and communication.

Some sensitive fields are editable directly by the cleaner, while others require admin or support intervention.

12.2 Basic Profile Information

Displayed at the top of the profile screen:

- Profile initials/avatar (auto-generated from name)
- Full name
- Registered email address
- Support message:
 - "To update your email, contact support@colossianscleaningservices.com or 07368914755."

Editable fields:

- First Name
- Last Name
- Phone Number
- City
- Postal Code
- Full Address
- Date of Birth (date picker)
- Gender (dropdown)

Non-editable field:

- Email (read-only)

12.3 Communication Preferences

- Toggle to **enable/disable reminders via Email and/or SMS**
- Preference stored per cleaner and used by the notification system

12.4 Security Settings

- **Change Password** option
- Requires:
 - Current password
 - New password
 - Confirm new password
- Password updates must invalidate active sessions if required by admin policy

12.5 Personal & Legal Information

Immigration & Eligibility

Cleaner must provide **one** of the following:

- National Insurance Number (preferred)
 - Validation: 2 letters + 6 digits + 1 letter (e.g., AB123456C)
- OR Share Code (if NIN not available)

Rules:

- Only one of the two fields is submitted
- At least one is mandatory
- Stored securely and visible only to admin and the cleaner

Additional personal info:

- Hobbies (text field)
- Student status (Yes / No)

12.6 Next of Kin Details

Used for emergency contact purposes.

Fields:

- Full Name
- Relationship (dropdown)
- Contact / Mobile Number

All fields are mandatory once the section is filled.

12.7 Work Details

Includes operational data used for job allocation:

- Do you drive? (Yes / No)
- Local working areas (multi-value text or selectable zones)
- Do you have children? (Yes / No)
- Employment Start Date (date picker)

This information is referenced by the admin system when assigning jobs.

12.8 Cleaning Services Capabilities

The cleaner profile displays supported service categories and tasks. These are typically **admin-assigned** and **read-only** for cleaners.

Categories include:

- Kitchen Area
- Bathroom / Toilet
- Bedroom / Living Room
- Ironing Services
- Other (custom tasks)

Each category contains a checklist of supported tasks (e.g., vacuuming, mopping, washing surfaces, ironing items, etc.).

Purpose:

- Used to match cleaners with suitable jobs
- Visible to admin during job assignment

12.9 Bank Details (Payout Information)

Used for salary and payout processing.

Fields:

- Bank Name
- Account Holder Name
- Account Number
- Sort Code

Rules:

- Editable by cleaner
- Changes may require admin approval (configurable)
- Data must be encrypted at rest

12.10 Account Deletion

- **Delete My Account** option available at the bottom of the profile
- On selection:
 - Confirmation modal shown
 - Warning about data loss and job access
- Actual deletion behavior:
 - Soft delete recommended (account deactivated)
 - Admin retains historical job, payout, and compliance records

C. Client Application:

1. Customer / Client Onboarding

1.1 Purpose & Overview

The Customer onboarding module allows new clients to register on the Colossians Cleaning Service platform. This collects essential contact, address, and account information to enable booking jobs, payments, and communication with assigned cleaners.

The flow ensures that all required information is captured for creating a functional and secure client account.

1.2 Registration Form

When a new client selects “**Sign Up**” or “**Register**”, they are presented with a structured form:

Form Fields:

- **First Name*** – Text input, mandatory
- **Last Name*** – Text input, mandatory
- **Email*** – Text input, mandatory, must be unique
- **Gender** – Dropdown (Male / Female / Other), optional

- **Date of Birth** – Date picker (DD/MM/YYYY), optional
- **Phone Number*** – Text input, mandatory, validated format
- **Address*** – Text input, mandatory
- **City*** – Text input, mandatory
- **Postal Code*** – Text input, mandatory
- **Company Name** – Text input, optional
- **Password*** – Password input, mandatory, must meet security policy (e.g., min 8 characters, alphanumeric, one special character)

Form Actions / Notes:

- **Submit button** – Creates the account upon validation
- **Already have an account? Sign in** – Redirects to login screen
- Validation errors are displayed inline for each field
- Password stored securely (hashed) in the database
- Email verification may be triggered upon registration (optional, depending on system policy)

1.3 Security & Validation

- Email must be unique; duplicate emails are rejected
- Phone number must be validated for proper format
- Password must meet security standards
- Optional fields (Company, Gender, DOB) are stored for profile completeness but not mandatory
- Client account cannot proceed to booking jobs until required fields are validated

1.4 Success Flow

- On successful submission:
 - Account is created
 - Client is redirected to **Dashboard / Home screen**
 - Optionally, a welcome email is sent
 - Client can immediately start booking services

2. Customer Dashboard & Onboarding Pop-up

2.1 Welcome Pop-up

When a customer logs in for the first time or has an incomplete profile, they land on the **Dashboard** and see the following pop-up:

Pop-up Content:

- **Welcome message:**
Welcome, (Customer) 🚀

- **Quick action steps:**
 1. Complete Profile (Verify Email if Pending)
 2. Create Property
 3. Create Jobs

Purpose:

- Guide new users through essential steps
- Ensure profile completeness
- Encourage adding properties and scheduling jobs

Actions:

- Clicking **Complete Profile** → redirects to **My Profile**
- Clicking **Create Property** → redirects to **Property Management**
- Clicking **Create Jobs** → redirects to **Job Creation**

2.2 My Profile

The **Profile section** allows customers to update their personal and company information:

Form Fields:

- **First Name*** – Text input
- **Last Name*** – Text input
- **Email*** – Text input, unique
- **Phone Number*** – Text input, validated format
- **Address*** – Text input
- **City*** – Text input
- **Postal Code*** – Text input
- **Date of Birth** – Date picker (DD/MM/YYYY), required for completion
- **Gender** – Dropdown (Male / Female / Other)
- **Company Name** – Text input
- **Enable reminders via email / SMS** – Checkbox
- **Password** – Change password functionality

System behavior:

- **Profile Completion Progress** displayed (e.g., 75%)
- Required fields (Address, DOB) highlighted until completed
- Email update instructions: contact support if change needed

Actions:

- Save profile updates → updates database
- Delete My Account → permanently deletes user data

2.3 Property Management

Customers can add and manage properties where cleaning services are needed:

Property List:

- Displays all properties added by the customer
- Columns: Property Name, Business Type, Address, City, Postal Code, Property Type

Add Property Form:

Fields:

- **Property Name*** – Text input
- **Business Type*** – Dropdown: Residential / Commercial
- **Address*** – Text input
- **City*** – Text input
- **Postal Code*** – Text input
- **Type of Property*** – Dropdown (Office, Flat, House, etc.)
- **Do you have a Hoover?** – Yes/No toggle
- **Do you have a Washing Machine?** – Yes/No toggle
- **Cleaning Products Provided?** – Checkbox
- **Do you have a Dryer?** – Yes/No toggle
- **Staff Preference** – Dropdown: Male / Female / No Preference
- **Access to Property** – Dropdown: Client Will Open / Provide Keys / Other
- **Do you have animals?** – Yes/No toggle

Actions:

- Save → property is added to customer's account
- Edit / Delete → modify or remove existing properties

Purpose:

- Ensure cleaners have all necessary details before job scheduling
- Customize property-specific requirements for cleaning tasks

3. Customer Dashboard

The **Customer Dashboard** is the central place where customers can view all their properties, ongoing jobs, and upcoming bookings. It is designed for quick access to job statuses, cleaner assignments, and scheduled times.

3.1 Properties Overview

Purpose:

- Shows all properties registered by the customer.
- Allows quick selection to view jobs associated with each property.

Properties Displayed Example:

- 5 Coopers Lane, EN6 5AG
- 70 K Fellows Road
- 2 Floor 17 Swan Yard
- 51 College Cross

Features:

- Click on a property → view all jobs related to that property.
- Property names are clickable and highlight the associated job schedule below.

3.2 Today's Jobs

Purpose:

- Displays all jobs scheduled for the current day across all properties.
- Provides quick status update and cleaner assignment for each job.

Fields & Details:

Client	Property	Status	Time	Cleaner(s)	Created
Wesley Robinson	Wesley - 56-58 Clerkenwell Road	Approved	18:30 - 21:30	SHEUN OROSUN MICHAEL	05/01/2026
Wesley Robinson	Wesley - Nancy Spains (Curtain)	In Process	08:00 - 10:30	Rwinkle Rwinkle	17/12/2025
Wesley Robinson	51 College Cross	In Process	09:30 - 13:30	Prabhdeep Kaur, Laxmi Kumari Chaudhary	17/12/2025

Functional Notes:

- Status can be **Pending / In Process / Approved / Completed**.
- Clicking a job → expands detailed view (check-in/out, client instructions, property info).

3.3 Upcoming Pre-Bookings

Purpose:

- Shows all future scheduled jobs with assigned cleaners.
- Helps customers plan ahead and track upcoming services.

Fields & Details:

Cleaner	Status	Scheduled Time	Service
Prabhdeep Kaur	In Process	Jan 16, 2026 - 09:30 AM	Cleaning
Laxmi Kumari Chaudhary	In Process	Jan 16, 2026 - 09:30 AM	Cleaning
Rwinkle Rwinkle	In Process	Jan 16, 2026 - 08:00 AM	Cleaning

Functional Notes:

- **Status Indicators:** Pending, Approved, In Process
- **Cleaner Assignments:** clearly listed for each job
- Clicking a pre-booking → opens job details (start/end times, cleaners, instructions)
- Dashboard updates dynamically to reflect changes in job status or cleaner availability

Notes:

- Dashboard should allow **filtering by property, status, and date**.
- Display must **highlight today's jobs** for quick access.
- Upcoming jobs list should **auto-update when cleaners confirm or jobs are completed**.
- Each job card should expand to **show full details** including access instructions, property type, and special notes.

4. Customer Calendar & Job Details

The **Customer Calendar** allows clients to view scheduled jobs, filter them, and access detailed information about each job. This feature provides complete visibility of assigned cleaners, property details, and job statuses.

4.1 Calendar View

Purpose:

- Display all jobs for the month in a calendar layout.
- Allow filtering by cleaner, property, or status.

- Provide quick access to individual job details by clicking on a date/job.

Filters Available:

- **Cleaner Name:** Select a specific cleaner to view their assigned jobs.
- **Property Name:** Select a property to view all jobs associated with it.
- **Status:** Filter jobs by Pending / Approved / In Process / Finished.
- **Date Navigation:** View jobs by month and day.

Calendar Entries:

- Each calendar cell shows job summary: property name, cleaner name(s), and scheduled time.
- Clicking on a job opens the **Job Details View** for that entry.

4.2 Job Details View

Purpose:

- Show comprehensive information for a selected job.
- Allow clients to review job status, assigned cleaners, and property-specific details.

Job Fields & Details:

Field	Example / Notes
Job Scheduled	Yes / No
Repeat Frequency	Weekly / One-time
Job Start Date & Time	11-01-2026, 07:00
Job End Date & Time	11-01-2026, 09:30
Status	Pending / Approved / In Process / Finished
Client	Wesley Robinson
Property Label	Wesley - Nancy Spains (Curtain)
Access to Property	Client Will Provide Keys / Client Will Open

Address	128-130 Curtain Road
City	London
Postal Code	EC2A 3AQ
Property Type	Pub / Residential / Office
Property Subtype	Cleaning Type
Cleaning Type	Commercial Deep Cleaning
Animals on Property	Yes / No
Staff Preference	Male / Female / No Preference
Equipment Provided	Hoover, Washing Machine, Dryer, Cleaning Products
Payment Source	Residential / Commercial
Cleaners Needed	Number of cleaners
Additional Instructions	Notes provided by client

Cleaners Assignment Table:

Cleaner	Status	Review
Rwinkle Rwinkle	Approved	-

Functional Notes:

- Jobs can repeat weekly or be one-off.
- Each job card should display **all assigned cleaners**, start/end time, property details, and instructions.
- Job status must dynamically update: **Pending** → **Approved** → **In Process** → **Finished**.
- Clicking a job on the calendar opens this **Job Details View**.

4.3 Multi-Day & Historical Jobs

Purpose:

- Allow clients to review past jobs and their outcomes.
- Track recurring schedules and cleaners assigned over time.

Functional Notes:

- Calendar shows historical jobs with their status (Finished / Approved / Pending).
- Jobs for the same property across multiple days show repeated entries.
- Each job can expand to view **cleaner details, start/end times, and completion notes**.
- Pagination or "+1 more" feature for days with multiple jobs.

Notes:

- Calendar UI must be interactive, mobile-friendly, and show day/week/month view.
- Filters must dynamically update visible jobs without reloading the page.
- Job Details View should be a modal or separate page for clarity.
- Status updates must sync in real-time with cleaner app updates.
- Handle multiple cleaners per job and display their names clearly.

5. Customer Jobs Management

This module allows clients to **view, manage, and create cleaning jobs** for their properties. Clients can see all job details, assign cleaners, set schedules, specify property access, and manage cleaning preferences.

5.1 Jobs List / Overview

Purpose:

- Display all cleaning jobs in a structured table with key details.
- Allow clients to **search, filter, edit, or delete jobs**.
- Provide clear visibility on job status and scheduling.

Columns / Fields to Display:

Column	Description
--------	-------------

Edit / Delete	Options to edit or remove the job
Cleaning Type	Office, Standard Cleaning, Office Surface Cleaning, Private Home, etc.
Date	Job scheduled date (e.g., 19-02-2026)
Start Time	Job start time (e.g., 18:00)
End Time	Job end time (e.g., 20:30)
Property	Name of the property (e.g., 56-58 Clerkenwell Road)
Status	Pending / Approved / In Process / Finished
Access to Property	Client Will Open / Will Get Keys
Cleaning Products Provided	Boolean: true / false
Washing Machine Provided	Boolean: true / false
Dryer Provided	Boolean: true / false
Hoover Provided	Boolean: true / false
Staff Preference	Male / Female / No Preference
Additional Details	Notes or instructions from client
Assigned Cleaner(s)	Names of assigned cleaner(s)
RRule / Repeat	Recurrence pattern (weekly, monthly, one-time)
Job Start Date	Recurring job start date

Job End Date	Recurring job end date
Job Type	Residential / Commercial
Number of Cleaners	Number of cleaners required
Number of Guests	Optional, for special instructions or celebrations
Celebration Type	Optional field for events (if applicable)
Venue Address	Optional, for event-based jobs

Functional Notes:

- Jobs support **recurrence rules** (e.g., weekly, every Thursday).
- Status should automatically update according to admin/cleaner workflow.
- Multiple cleaners can be assigned per job.
- Filtering and search must allow by property, cleaner, status, or date.

5.2 Add Job / Create Cleaning Job

Purpose:

- Allow clients to **create a new cleaning job** with all necessary details.
- Ensure clients can select property, assign cleaners, and provide job-specific instructions.

Form Fields / Options:

Field	Description
Property	Select property for cleaning job
Payment Method	Select invoice payment type (Residential / Commercial)
Job Start Date	Date picker
Start Time	Time picker
End Time	Time picker

Cleaners Needed	Number of cleaners required
Cleaning Type	Select type of cleaning (Office, Standard, Deep Clean, etc.)
Additional Instructions	Optional notes (max 100 characters)
Hoover Provided	Checkbox to indicate if hoover is available
Washing Machine Provided	Checkbox to indicate if washing machine is available
Cleaning Products Provided	Checkbox to indicate if client provides cleaning products
Dryer Provided	Checkbox to indicate if dryer is available
Staff Preference	Male / Female / No Preference
Access to Property	Client Will Open / Will Get Keys

Functional Notes:

- **Validations:** start time < end time, required fields must be filled, cleaners needed > 0.
- Upon submission, job appears in **Jobs List** and **Calendar view**.
- Recurring jobs can be set with a **start date and weekly/monthly repeat** pattern.
- Newly created jobs default to **Pending** status.
- Clients can **assign cleaners** from the available pool or leave unassigned.

5.3 Edit / Delete Job

Purpose:

- Allow clients to **update job details** or remove jobs if necessary.
- Changes should reflect immediately in the **dashboard and calendar**.

Functional Notes:

- Editing includes updating cleaners, time, date, job type, and instructions.
- Deleting requires a **confirmation modal** to prevent accidental deletion.
- Status changes dynamically if job details are edited.

Notes

- Jobs table must support **sorting, filtering, and search**.
- Recurring jobs should appear correctly in calendar views.
- Multiple cleaner assignment must allow **selecting multiple cleaners**.
- Form validations are critical for proper scheduling and payments.
- Dashboard should clearly differentiate **Pending / Approved / In Process / Finished jobs**.

6. Customer Properties Management

This module allows clients to **view, manage, and add properties** for cleaning services. Each property stores detailed information about location, type, equipment, and preferences for cleaning staff.

6.1 Properties List / Overview

Purpose:

- Display all properties belonging to the client.
- Allow clients to **search, filter, edit, or delete properties**.
- Provide clear details for cleaning scheduling and job creation.

Columns / Fields to Display:

Column	Description
Edit / Delete	Options to edit or remove the property
Name	Name of the property (e.g., 5 Coopers Lane)
Address	Full address (street, city, postal code)
City	City of property
Postal Code	Postal code
Type	Property type (Private Home / Office / Commercial)
Subtype	Flat, End of Terrace, House, etc.

Property Type	Residential / Commercial
Hoover	Brand or Yes/No
Animal Property	Yes / No
Additional Details	Number of bedrooms, bathrooms, guest toilets, living rooms, office, conservatory, dining room, etc.
Access to Property	Client Will Open / Will Get Keys
Provide Cleaning Products	Yes / No
Provide Washing Machine	Yes / No
Provide Dryer	Yes / No
Staff Preference	Male / Female / No Preference

Functional Notes:

- Each property is tied to **all cleaning jobs** associated with it.
- Properties can have **multiple features**, such as appliances, animal presence, and access type.
- Search and filter must support **property name, city, type, or subtype**.

6.2 Add Property / Create New Property

Purpose:

- Allow clients to **add a new property** to the system.
- Collect all necessary information for scheduling jobs and assigning cleaners.

Form Fields / Options:

Field	Description
Property Name	Name of the property (required)
Business Type	Residential / Commercial
Address	Street address (required)

City	City of property (required)
Postal Code	Postal code (required)
Type of Property	Flat, House, Office, etc.
Hoover	Brand or Yes/No
Washing Machine	Checkbox: indicate if client has a washing machine
Dryer	Checkbox: indicate if client has a dryer
Cleaning Products	Checkbox: indicate if client provides cleaning products
Staff Preference	Male / Female / No Preference
Access to Property	Client Will Open / Will Get Keys
Animals Present	Yes / No
Additional Details	Optional: bedrooms, bathrooms, living room, office, dining room, conservatory, guest toilets

Functional Notes:

- Form validation: all required fields must be completed.
- On submission, property is added to **Property List** and becomes available for **job assignment**.
- Optional details like appliances, animal presence, and staff preference should be stored for scheduling logic.
- Properties can be edited or removed later with confirmation.

6.3 Notes

- Properties module must **integrate with Jobs module**, so each job can select a property and auto-fill related info.
- Multi-field search and filters improve usability for clients with multiple properties.
- Ensure checkboxes (Hoover, appliances, cleaning products) store boolean values correctly in the database.
- Staff preference and access type should influence scheduling and cleaner assignment logic.

7. Customer Job Summary

This module allows clients to view all completed, ongoing, and pending jobs in a summarized form, along with work hours, payout details, and payment status. It helps clients track job history, payments, and performance.

7.1 Jobs Summary Table

Purpose:

- Display all jobs associated with the client.
- Include work hours, hourly rates, total payout, and status for quick review.
- Support filtering by property, date, or status.

Columns / Fields to Display:

Column	Description
Property	Name or address of the property where the job was performed
Start Date	Job start date
End Date	Job end date
Worked Hours	Total hours worked for the job
Hourly Rate	Rate per hour (can be £0 if not set)
Payment Source	Residential or Commercial
Total Payout	Calculated based on worked hours × hourly rate
Status	Paid / Unpaid / Pending

7.2 Functional Notes

- Jobs should be sortable by date, property, or status.
- Work entries should reflect actual hours worked, pulled from cleaner check-in/check-out times or validated time logs.
- Total payout calculation:
 - $\text{Total Payout} = \text{Worked Hours} \times \text{Hourly Rate}$
 - Payment source affects accounting and reporting (Residential vs Commercial).
- Status updates: automatically mark as paid once payment is processed.

7.3 Considerations

- Integrate with Payout Computation module so that totals are accurate and dynamic.
- Ensure real-time updates if a job's hours, rate, or status changes.
- Provide filters and search functionality for easier client navigation, especially for clients with multiple properties and recurring jobs.
- Optional: export job summary to CSV or PDF for client records.

8. Customer Notifications

This module provides **real-time alerts and updates** to clients about the status of their jobs. It ensures the client is always informed about progress, approvals, and completions.

8.1 Notification Types

Notifications can include:

1. Job status changes
 - Example: "Job at '51 College Cross' is now in progress"
2. Cleaner actions
 - Example: "Job at 'Wesley - 56-58 Clerkenwell Road' approved by Cleaner"
3. Job completion updates
 - Example: "Job at 'Wesley - 1 Gerrard Road' has been completed"

Optional future enhancements:

- Payment reminders
- Feedback requests after job completion

8.2 Notification Table Structure

Field	Description
Notification Type	Category of notification (Job Status, Cleaner Approval, Job Completed, etc.)

Message	Text describing the notification (dynamic)
Status	Unread / Read
Date & Time	Timestamp when notification was generated
Related Job / Property	Reference to the job or property for context

8.3 Features & Functionality

1. **Real-Time Updates:**
 - Push notifications triggered automatically whenever a job status changes, cleaner approves a job, or job is completed.
2. **Read/Unread Status:**
 - All new notifications are marked **Unread**.
 - Users can mark as **Read** individually or clear all notifications.
3. **Sorting & Filtering:**
 - Sort notifications by **date** or **status**.
 - Filter by **job, property, or type** for quick access.
4. **Notification History:**
 - Maintain a historical log of all notifications for reference.
 - Paginate if notifications are large in number for better UI performance.
5. **Clickable Links (Optional):**
 - Clicking a notification can take the user directly to the **job details page**.

8.4 Notes

- Integrate this module with the **Jobs module** to automatically fetch updates on job actions.
- Ensure notifications are **synchronized in real-time** across multiple devices if the client logs in from web or mobile.
- Use database fields: `notification_id`, `user_id`, `job_id`, `type`, `message`, `status`, `created_at`.
- Consider **WebSocket / Push notifications** for instant updates.

9. Preferred Staff

This module allows **customers to select preferred cleaners** for their bookings, see their **availability**, and schedule jobs accordingly. It ensures that clients can **prioritize trusted staff** while making bookings and provides visibility into staff schedules.

9.1 Key Features

1. **Preferred Staff Selection:**
 - Customers can mark certain staff as **preferred**.
 - Preferred staff appear at the **top of staff lists** when creating a job.
 - If a customer previously booked a cleaner, that cleaner is automatically suggested for future jobs.
2. **Work Shifts Display:**
 - For each staff, display **daily work shifts** (start and end times) and weekly schedule.
 - Only **future available slots** are shown for booking; past or fully booked slots are hidden.
3. **Slot Selection for Jobs:**
 - Customers pick a **time slot** from the available hours of preferred staff.
 - Once selected, the job can be created and automatically assigned to that staff member if available.
 - Multiple slots per staff can be shown for flexibility.
4. **Availability Status:**
 - Indicate **available**, **partially available**, or **no slots available** for each staff.
 - Slots already assigned to other jobs are **disabled** to prevent double booking.
5. **Priority Assignment:**
 - If a customer marks staff as preferred and creates a job:
 1. Preferred staff are **automatically suggested first** for assignment.
 2. Customers can manually assign any preferred staff based on availability.
 3. Non-preferred staff can still be assigned if preferred staff are unavailable.
6. **Dynamic Updates:**
 - Staff availability updates **in real-time** as other jobs are assigned or canceled.
 - Any changes in work shifts reflect immediately on the customer's booking screen.

9.2 Example Data Structure

Field	Description
Staff ID	Unique identifier for the staff member
Name	Staff full name
Preferred	Boolean flag indicating if the customer prefers this staff
Work Shifts	Array of weekly shifts with start and end times

Available Slots	Array of available time slots for the selected date
Job Assignments	List of jobs already assigned to this staff
Status	Availability: Available / Partially Available / Fully Booked

9.3 Booking Flow Using Preferred Staff

1. Customer navigates to **Preferred Staff** page.
2. Customer selects a staff member marked as **preferred**.
3. System shows all **available time slots** for the selected date(s).
4. Customer selects the slot and creates a job.
5. Job is **auto-assigned** to that staff if available, otherwise system suggests alternatives.
6. Notifications are triggered to the staff and customer (integrates with the **Notifications module**).

9.4 Notes

- Ensure **slot selection prevents overlapping bookings**.
- Preferred staff should be **highlighted visually** for the customer.
- Use **real-time updates** via WebSocket or API polling for availability.
- Integrate with **Jobs module** to auto-update assigned slots and staff workload.
- Future enhancement: allow **auto-prioritization** for weekly recurring jobs with preferred staff.

10. Training & Resources

This module provides **learning materials, guides, and resources** to staff and customers (if needed), helping them **understand processes, procedures, and platform usage**. It also tracks **content visibility** and interaction.

10.1 Key Features

1. **Content Listing:**
 - Display all available training materials in a **list format**.
 - Each item includes:
 - **Title**
 - **Description**
 - **Media Type** (video, PDF, image, link, etc.)
 - **Status** (Unseen, Seen)
2. **Search & Filter:**

- Search by **title or description**.
- Filter by **media type** for easier navigation.
- 3. **Content Interaction:**
 - Users can **open or view content** directly in the platform.
 - System marks content as **Seen** once opened.
 - Unseen content is highlighted to attract attention.
- 4. **Content Management (Admin Side):**
 - Admin can **add, edit, or remove content**.
 - Assign content to specific **roles** (cleaner, customer, manager).
 - Upload media in various formats (video, PDF, image, link).
- 5. **Usage Metrics:**
 - Track **total content, seen vs unseen**, and optionally, **time spent on each resource**.
 - Allow admin to **generate reports** to assess engagement and staff training completion.

10.2 Example Data Structure

Field	Description
Resource ID	Unique identifier
Title	Resource name
Description	Brief overview
Media Type	Video / PDF / Image / Link
URL/Attachment	Link to content or uploaded file
Status	Seen / Unseen
Assigned To	Roles or users who can access

10.3 Notes

- Integrate with **user profiles** to track seen/unseen status per user.
- Provide **responsive UI** for content display (desktop, mobile).
- Ensure **search and filter functionality** is efficient with large datasets.

- Allow **future expansion** for quizzes, certifications, or progress tracking.

11. User Profile

The Profile module allows users (customers, staff, or admin) to view and manage their personal and professional information. It ensures users have up-to-date details, controls over notifications, and access to security settings.

11.1 Key Features

1. Profile Overview:

- **Display user's basic information:**
 - Full Name
 - Email Address
 - Phone Number
 - Profile Completion Percentage (e.g., 100%)
- Option to contact support if email update is required.

2. Personal Information:

- Users can view their personal details:
 - First Name
 - Last Name
 - Date of Birth
 - Gender
 - Address (Street, City, Postal Code)
- Company information (if applicable):
 - Company Name

3. Account Settings:

- Email and Password Management:
 - Display email (with support contact for changes).
 - Option to change password securely.
- Notifications:
 - Enable or disable reminders via Email and/or SMS.

4. Profile Completion Tracker:

- **Visual indicator (e.g., progress bar) showing profile completion percentage.**
- **Encourages users to fill in missing information for a 100% complete profile.**

5. Action Buttons:

- **Change My Password – Opens secure password change flow.**
- **Delete My Account – User can permanently remove their account.**

11.2 Example Data Structure

Field	Description
-------	-------------

User ID	Unique identifier
First Name	User's first name
Last Name	User's last name
Email	User's primary email
Phone Number	Contact number
Address	Street, City, Postal Code
Date of Birth	DOB (DD/MM/YYYY)
Gender	Male / Female / Other
Company Name	Optional for business users
Profile Completion	Numeric value (0–100%)
Notifications	Email / SMS reminders enabled
Account Actions	Change password, Delete account
Support Contact	Email & phone for assistance

11.3 Notes

- **Validation:** Ensure phone number and email are validated on entry.
- **Security:** Password changes must follow secure protocols (hashing, OTP verification if needed).
- **Responsive UI:** Layout adapts to desktop and mobile screens.
- **Profile Completion Logic:** Calculate completion percentage based on required fields (first name, last name, phone, address, DOB, company).

End-to-End Platform Flow

(Client → Cleaner → Admin → Job Completion)

1. CLIENT (CUSTOMER) – COMPLETE FLOW

1.1 Client Registration & Secure Access

- **Sign-up:** Client registers via mobile app or web portal using **email or phone number** with a secure password.
- **Verification:** OTP verification (SMS/email) is mandatory to confirm authenticity.
- **Role-Based Authentication:** Ensures client cannot log in as a cleaner or admin.
- **Post-Login:** After verification, the client lands on the **Client Dashboard**, showing:
 - Profile completion percentage
 - Quick action buttons for creating jobs, viewing properties, and preferred staff selection

1.2 Property Setup (Residential / Commercial)

Before booking a job, the client must add at least one property.

Property Details Captured:

- Property Name
- Full Address (Street, City, Postal Code)
- Access Instructions (e.g., keys provided, client opens property)
- Property Type: Residential / Commercial
- Subtype / Additional Details: Number of bedrooms, bathrooms, guest toilets, living rooms, office, dining room, conservatory
- Equipment Available: Hoover, washing machine, dryer, cleaning products
- Staff Preference: Male / Female / No Preference
- Animal Presence: Yes / No

System Behavior Based on Property Type:

- Determines **payment routing** (residential vs commercial)
- Sets **cleaner payout source**
- Controls **reporting, invoices, and analytics**

1.3 Job Creation (Core Workflow Start)

The client initiates the workflow by creating a job:

Steps for Job Creation:

1. Select **Property**
2. Choose **Job Type** (Residential / Commercial)
3. Select **Date & Start Time**
4. Enter **Expected Duration**
5. Add **Job Instructions / Special Notes**
6. Select **Number of Cleaners Required**
7. Submit Job

System Behavior After Job Creation:

- Job status = **Pending**
- Job appears on:
 - Client calendar (Day / Week / Month view)
 - Admin dashboard
- Client receives **confirmation email**
- Only **available & active cleaners** receive **job notification emails**

1.4 Job Visibility & Client Controls

- Client can track jobs in **calendar view** or **list view**.
- **Editing rules:** Jobs editable up to **24 hours** before start.
- **Cancellations:** Trigger warnings and may restrict future bookings.
- **Notifications Sent To Client:**
 - Job Created
 - Job Assigned
 - Job Accepted
 - Job Completed

Client Role Ends Here:

- Cannot assign cleaners
- Cannot approve cleaners
- Only **tracks job status** and receives **real-time updates**

2. CLEANER (STAFF) – COMPLETE FLOW

2.1 Cleaner Onboarding & Eligibility

To join the platform, cleaner must complete:

- Registration + OTP verification
- Government ID verification / Share Code / NIN

- Document uploads (passport, DBS, other compliance)
- References & background checks
- Availability setup (time slots)

System Restriction: Only **active and eligible cleaners** receive jobs.

2.2 Job Notification & Interest (Apply Job Flow)

When a client creates a job:

1. System checks cleaner **availability & eligibility**.
2. Only **active, available cleaners** receive email notifications.

Notification Includes:

- Property location & type
- Job date & time
- Duration
- Button: **“Request to allocate this job”**

Cleaner Action:

- Click to show interest → Job marked as **Requested** in Admin Panel

2.3 Job Assignment (Admin-Controlled)

- Cleaners cannot self-assign jobs.
- Admin assigns cleaners based on:
 - Availability
 - Job duration
 - Staff preference (if specified)
- After assignment:
 - Job appears in **Cleaner My Jobs dashboard**
 - Status = **Assigned**
 - Cleaner receives assignment notification

2.4 Job Acceptance by Cleaner

- Cleaner reviews job details:
 - Property details, access instructions, and equipment
 - Client information
 - Date, time, and special instructions
- Cleaner **Accepts Job**
 - Status = **Accepted**
 - Email sent to client and admin confirming acceptance

2.5 Pre-Job Notifications & Reminders

- Cleaner receives automated reminders:
 - 24 hours before job
 - 3 hours before job
- **Cleaner dashboard popups** display:
 - Today's jobs only
 - Only accepted jobs

2.6 Check-In / Check-Out (Time Tracking)

- **Check-In:** Allowed at job start or 15 minutes before
- **Check-Out:** At job end or after completion
- **System Behavior:**
 - Future jobs are locked until their date
 - Only today's job accessible
 - Check-in/out timestamps support overnight and midnight shifts

2.7 Job Completion

- After check-out:
 - Job status = **Completed**
 - Hours automatically logged
 - Cleaner cannot edit or delete job
 - Feedback request email sent to client

2.8 Cleaner Payment & Records

- Hours & pay calculated based on:
 - Job type (Residential / Commercial)
 - Actual hours worked
- Cleaner dashboard shows:
 - Daily / weekly / monthly hours
 - Residential vs Commercial earnings
 - Payment status (Pending / Paid)

3. ADMIN – COMPLETE FLOW (CONTROL & GOVERNANCE)

3.1 Admin Dashboard (Central Command)

Admin has visibility over:

- All jobs: pending, assigned, completed
- Cleaner availability & schedule
- Client activity & bookings
- Notifications / alerts: document expiry, cancellations

3.2 Job Requests Review & Assignment

- Admin reviews job requests (cleaners who applied)
- Admin assigns **exact number of cleaners requested by client**
- Checks include:
 - Availability conflicts
 - Hour limits
 - Eligibility (document, share code, training completion)

3.3 Multi-Cleaner Assignment Logic

- If client requested 3 cleaners:
 - Admin assigns exactly 3
 - Each cleaner must **accept independently**
 - If one declines → Admin notified → replacement assigned

3.4 Monitoring During Job Execution

- Admin can track:
 - Cleaner check-in/out times
 - Total hours worked
 - Live job status

3.5 Compliance & Workforce Control

Admin ensures platform compliance:

- Document expiry reminders (visa, DBS, passport)
- Removal of inactive staff
- Blocking assignments if:
 - Documents expired
 - Share code invalid
 - Training incomplete
 - Staff account inactive

3.6 Job Closure & Financial Oversight

- After completion:
 - Admin reviews job summary
 - Confirms hours and payouts
 - Job becomes **audit-locked**
 - Client feedback stored
 - Reports updated for accounting & compliance

4. TRAINING & RESOURCES MODULE

- Cleaners can access **training materials** and **resources** via their dashboard.
- Status tracking: Seen / Unseen content
- Completion may be **required to qualify** for certain job assignments

5. NOTIFICATIONS MODULE

For Clients, Cleaners, and Admin:

- Job created, assigned, accepted, in-progress, completed
- Cleaner reminders (24h / 3h)
- Document expiry / compliance alerts
- Real-time push/email notifications for all job lifecycle events

6. PREFERRED STAFF MODULE

- Clients can **mark preferred cleaners** for future bookings
- Preferred cleaners' **availability is highlighted**
- When creating jobs, system can suggest preferred staff
- Cleaner assignments **respect preferences** but still follow admin verification

7. USER PROFILE MODULE

User can view and manage:

- Personal information: Name, DOB, Gender, Address, Phone, Email
- Company details (if business)
- Notification preferences (Email / SMS)
- Password changes
- Profile completion indicator (encourages filling all fields to 100%)
- Delete account option

8. END-TO-END JOB LIFECYCLE SUMMARY

1. Client adds property (Residential / Commercial)
2. Client creates job + selects number of cleaners
3. System notifies **eligible and available cleaners**
4. Cleaners show interest / apply
5. Admin reviews applications
6. Admin assigns required cleaners
7. Cleaners accept job
8. Automated reminders sent
9. Cleaners **check-in / check-out**
10. Hours tracked accurately
11. Job marked as **Completed**
12. Payment processed
13. Feedback collected from client

14. Job **audit-locked** for records

Admin Invoicing System – Detailed Workflow

Purpose:

Enable admin to **create, manage, and send professional invoices** for any client (residential or commercial) while reflecting completed jobs, hours, staff assignments, and payments. This system must comply with industry standards, including VAT, itemization, and audit-ready records.

1. INVOICE CREATION – CORE FLOW

1.1 Invoice Initiation

Admin can create invoices manually or automatically based on **completed jobs**:

- **Automatic generation:** System generates invoices based on completed jobs for a selected period (daily, weekly, monthly).
- **Manual creation:** Admin can create invoice for a specific client and select which jobs to include.

Invoice Start Inputs:

- Client selection (from registered clients)
 - Invoice period / date range
 - Property (optional if client has multiple properties)
 - Job type filter: Residential / Commercial
 - Job status filter: Completed only
-

1.2 Invoice Details Captured

Mandatory Fields:

- **Invoice Number:** Auto-generated, sequential, or customizable format
- **Invoice Date:** Default = current date
- **Due Date:** Admin can set (standard: 7, 14, 30 days)
- **Client Name & Contact Info:** Pulled from profile
- **Client Address:** Pulled from property details
- **Company Name / Business Details:** Pulled from client profile (if commercial)
- **Payment Terms:** e.g., Bank Transfer, Card, PayPal
- **Currency:** GBP (default), with option for multi-currency

Optional Fields:

- PO Number / Reference Number (for commercial clients)
 - Tax Identification Number (for VAT)
 - Notes / Terms and Conditions (e.g., late payment fee, refund policy)
-

1.3 Job Line Itemization

Each job included in the invoice is displayed as a **line item**:

Field	Description
Job Date	Date when service was performed
Property Name	Residential / Commercial property
Job Type	Residential / Commercial
Cleaner(s) Assigned	Names of staff who completed the job
Hours Worked	Exact hours from check-in/check-out logs
Rate	Hourly rate (from client's agreed plan)
Total	Hours × Rate
Additional Charges	e.g., equipment use, cleaning products, overtime
Discount	Optional percentage or fixed discount
Tax / VAT	Calculated per line or on total amount

Subtotal Sum of all line items before tax

Total Amount Total payable including tax

Example:

- 02/09/2025 | 5 Coopers Lane | Residential | Joicy Sebastian | 4 hrs | £15/hr | £60 | – | £12 VAT | £72
-

1.4 Taxes & Compliance

- **VAT Handling:** Automatic calculation at standard rate (e.g., 20%)
 - **Tax Summary Section:** Shows subtotal, tax, and total amount
 - **Compliance:** Invoice includes:
 - Invoice number
 - Issue date
 - Client details
 - Business registration / VAT number (if applicable)
 - Payment terms
 - **Audit-Ready:** All invoices stored in system with **immutable records**
-

1.5 Discounts & Adjustments

Admin can add:

- **Fixed or percentage discount**
- **Promotional codes** (if applicable)
- **Adjustments for refunds or prior overpayment**

System Behavior:

- Automatically recalculates subtotal, tax, and total
 - Reflects adjustments in **line-item history**
-

1.6 Payment Tracking

Invoice Statuses:

- Draft (editable before sending)
- Sent (invoice sent to client email)
- Partially Paid
- Paid in Full
- Overdue (automatic after due date)

Payment Methods:

- Bank Transfer
- Card / Stripe / PayPal integration
- Cash (admin entry)

Automated Reminders:

- Sent 7 days before due date
- On due date
- After overdue period (optional late fee notice)

Reconciliation:

- Payments logged automatically against invoices
 - Partial payments split across line items
 - System shows **outstanding balance**
-

1.7 Invoice Preview & PDF Generation

- Admin can **preview invoice** before sending
 - PDF format meets industry standards:
 - Client and business info
 - Job line items with breakdown
 - Total, tax, discounts, adjustments
 - Payment terms & methods
 - Notes / terms (customizable)
 - PDF can be **emailed directly** or **downloaded for print**
-

1.8 Email Integration & Notifications

- System sends invoice via **client email**
- Optional **SMS notification** with invoice link
- Admin receives confirmation of delivery
- Reminders sent automatically based on due date

1.9 Invoice History & Reporting

Invoice Dashboard Shows:

- All invoices (filterable by client, date range, status)
- Total invoiced amount vs. total received
- Payment overdue alerts
- Ability to **resend invoice**, **download PDF**, or **export CSV**

Reports Generated:

- Revenue reports by client, property, or job type
- Tax reports (VAT summary, compliance-ready)
- Cleaner payroll reports based on hours billed

1.10 Audit & Compliance

- All invoices are **immutable after sending** (cannot edit after marking sent/paid)
- Full **audit trail** maintained:
 - Who generated the invoice
 - Timestamp
 - Job details included
 - Payment history
- Complies with **UK accounting standards** and VAT regulations

1.11 Automation & Integration

- **Recurring invoices:** For regular commercial clients
- **Bulk invoice generation:** Generate multiple client invoices at once
- **Integration:** With accounting software (Xero, QuickBooks) for automated sync
- **Job-Driven:** Automatically pulls job details for invoice to reduce admin errors

1.12 Optional Enhancements

- **Invoice Notes / Client Messages:** Custom instructions or thank you message
- **Early Payment Incentives:** Apply discount if paid before due date
- **Multi-Property Invoice:** Combine multiple properties for one client
- **Multi-Cleaner Pay Breakdown:** Show which cleaners contributed to total hours

2. END-TO-END INVOICE FLOW SUMMARY

1. Admin selects **client & date range**
2. System fetches **completed jobs**
3. Admin reviews line items, adds discounts/adjustments if needed
4. Taxes / VAT calculated automatically
5. Invoice **previewed & approved**

6. Invoice **sent to client** via email / SMS
7. Payment tracked against invoice
8. Reminders sent automatically until paid
9. Invoice recorded in **history** for audit and reporting
10. Reports available for revenue, tax, and payroll reconciliation

This setup ensures the admin can **create professional, compliant, and detailed invoices**, manage payments efficiently, and maintain full audit trails. It also **ties directly into the job management system**, so every completed job automatically contributes to invoicing.
